well hopefully they can keep the chanels flowing on the pw simulcast full
time instead of part time

28307. New HFD System

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-04-29 16:10:58 UTC
From: andrewjpm2005
Topic: 28307 Message: 28307

Hi All:

I've been scanning for years and was surprised when HFD went silent. I've read the email discussion in this group, but must admit it's over my head. Can someone post a few links etc. that will point me in the right direction concerning equipment and knowledge needed to again hear HFD? It sounds a little involved!

Thanks,

Andy

28309. Re: City of Houston Official Radio System Change!!!!

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-01 22:52:58 UTC
From: TxRadio
Topic: 28118 Message: 28309

Not for long.... When the CofH was granted there wide band extension, the term specifically stated " ALL licenses not associated with the new system go back into the FCC PW pool" This is all their low band, VHF, UHF, 900Mhz, and any 800Mhz not in the new system.

This was common in all extensions granted by the FCC...

Do you have a copy of the waiver? I have not been able to find anything that says they have to give back ALL of their PW frequencies. I know its common in the waiver process, but its also on a case by case basis and not a hard and fast rule.

28311. Fwd: apx7000xe mode 3.5

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-02 02:32:55 UTC
From: Kevin Chessher
Topic: 28311 Message: 28311

If anyone on the list has one of these for sale feel free to contact him.

I have no idea who he is or why this was sent to me, maybe he's a
Nigerian Prince??? :-P

-------- Original Message --------

Yeah, there are plenty of examples where VHF or UHF channels are still being used by agencies that have gone to trunking systems.
Check out area fire departments. These are mainly used for paging and carry dispatch audio from the primary talkgroup.

> I've been scanning for years and was surprised when HFD went silent. I've read the email discussion in this group, but must admit it's over my head. Can someone post a few links etc. that will point me in the right direction concerning equipment and knowledge needed to again hear HFD? It sounds a little involved!
>
> Thanks,
>
> Andy
>

The local situation has been in a flux, making this hard to respond to. From reading the discussion, you are probably aware that 5 HFD talkgroups (Dispatch, NE, SE, NW, and SW) are currently monitorable on System 1-A7 (TXWARN P25), Site 3-005 (Houston Gen. Gov't. Services Simulcast). These TGIDs can be followed by the current crop of digital scanners (assuming you are located where reception isn't an issue).

http://www.radioreference.com/apps/db/?sid=4563

For the most receiving options you would need TDMA capability, limiting you to the PSR-800 (no longer in production, now greatly overpriced, and no keyboard). So, the question is, if you are only interested in HFD, do you buy a current digital radio to be able to receive these few talkgroups, or wait and see if Uniden comes out with a TDMA capable offering (hopefully they will) or GRE resumes production, etc.? And if you wait, will there be enough unencrypted talkgroups to make it worthwhile, and how long will the wait be?

I am not one of the more knowledgeable members of this group, so I hope my take on all this isn't too far off. You can find a lot of helpful info on Radio Reference. Here's a link to the Forums page which includes discussion of different radio brands and the Texas Forum. Also use the dark blue buttons at the top to check out the Wiki (and Database). Hope this helps!

28324. RE: [HoustonScan] FYI - Pearland Fire/ EMS

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-02 22:31:07 UTC
From: Myles Barkman
Topic: 28296 Message: 28324

It's strange hearing them dispatching Pearland now. One major change is that they have responding units move to TAC 1 which will keep folks from hearing any fireground activity on UHF. But I can see why they would not want all that on a primary dispatch talkgroup with all the other stuff they have to keep up with up there.

To: houstonscan@yahoogroups.com
Subject: [HoustonScan] FYI - Pearland Fire/ EMS

Effective 5/1/2013 Pearland Fire/EMS will be dispatched by Harris County Emergency Core.

Pearland PD will still be dispatched by City of Pearland.

I volunteered with HCEC years ago and have nothing against them, but I preferred our Pearland PD dispatch team handling both PD and Fire/EMS. Having everyone in the same center seemed to me to be a better plan. But I am sure they will provide seemless quality services..

I was listening to that on the way home. When I got inside the house, I didn't hear anymore location updates. I thought maybe they went to South Central but didn't hear them there. Didn't hear them talk about digital but I was probably getting out of the car at that point.

It looks like about 6-10 of the channels will be rebroadcast in FDMA on the PW simulcast layer. The rebroadcast talkgroups have the lowest priority in the system. So if the system is busy, these will not be heard at all.

Oh, this scanner hobby of mine that I've had since I was 12-years-old is finally coming down to nothing. My heart is breaking. And the digital scanner I have (Pro-96) is not capable of receiving anything that is going to 700 MHz. I have a Pro-164 with 700 MHz but not P25 APCO to receive it. (Who designed this scanner without thinking???)
Oh well, there will still be some localized analog security communications and various other systems I can still listen to. It probably will not be long before NOAA moves to a system you can't hear unless you're rich enough to buy the receiver. Does anyone know if at least some of the HPD channels will still be heard on 400 MHz?
I end this message about to cry. :(

I am not an expert on scanners but if it will do fdma, most of the hpd stuff will be on the old public works site which is all 800 mhz. So all is not lost.

All frequencies for the Houston General Govt. Site (3-005) on the 1A7 system are in the 800 MHz range, and I'm picking it up on my Pro-96.

Thanks for the input! May I ask what frequencies you have programmed in to hear them? Control channels, etc? I can't follow what Radio Reference lists, because it depends on what area of town you're in to receive the perimeter. I live in NW Harris County...1960 and 249 area. Any frequency help would be appreciated!

Thank you! I'll check the page out and begin programming. I thought about getting the Pro-106 but not sure if I really need to shell out the extra money for it if the 96 can do it all. Thanks again!

249/1960 is almost directly underneath one of the Northwest Simulcast towers. Should get great reception on that one.

As of this writing, I'm picking up HFD NW and SE off and on, and Parking Enforcement. It's chopping in and out. I have the latest firmware for the DSP so don't think it's that. Using the 800 MHz antenna RS sells. Could be a number of things, but HEY, I'm receiving so far! :)

They want to change the recently installed space shuttle display at Space Center Houston. The future new display will show the existing shuttle mock-up atop the 747 carrier aircraft. This exhibit is slatted to be open to the public in Feb 2015.

Glad to hear you got it working. So far I only put in the one control channel to test it out and see if I could receive anything. What a nice surprise that it worked. I'll probably add the alternate control channels and duplicate the system into 3 banks: HFD, HPD, and Parking. Speaking of which, Parking should be busy tonight with all the activities downtown and the new parking meters!

FYI to those interested,

A Salute to Law Enforcement is at Willowbrook Mall (249&1960) today 10 to 2.
There's usually a large contingent of local and federal law enforcement in our area on display, also a lot of freebies for kids.

Yea, ever since I got my Yupiteru MVT-7100 about a month ago, I've been neglecting my Pro-96 lol. But now I'll have a reason to keep the light going on it. My heart still breaks because scanner listening is not like it used to be. But I guess it's the same change over as it was when crystals were replaced with internal digital chips that would allow us to just program the frequencies in. Just something we had to get used to. Certainly made it easier, but technology changes can sure ruin the "good ol' days".

28354. CSC at Reliant Park

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-04 21:10:20 UTC
From: Eric C. Carlson
Topic: 28354 Message: 28354

CSC (event security contractor) at Reliant Park had an STA issued this
week for a repeater on 462.5125 (output, TRBO) through 6/30 while
their license application is pending.
http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3470397

I do not yet see a pending application for a permanent license for
them yet in the FCC ULS.

I didn't catch anything specific on 5/2 however there has been air-to-air activity on 271.0 (NORAD) recently, such as on 5/1 and 5/4 with possible air intercept drills. There is also some activity on 288.5 (ANG operations at EFD) that is probably related. I caught some brief talk on 149.675 (AM) on 5/2.

Once it starts going put a wildcard tg and see what you come up with.

MThanks for the input! May I ask what frequencies you have programmed in to hear them? Control channels, etc? I can't follow what Radio Reference lists, because it depends on what area of town you're in to receive the perimeter. I live in NW Harris County...1960 and 249 area. Any frequency help would be appreciated!

I'm pretty sure the Pro-96 uses open/closed banks as opposed to the "wildcard" method...but I could be wrong.

I also updated the wiki to reflect that HFD's special event detail was operating on the P25 system talkgroup 45348 (CoH 9F). This is a non-encrypted talkgroup.

You are correct (as usual!). Function 5 closes the bank and you will see a minus sign on the display and the words "Bank Closed" will briefly appear. Function 5 opens the closed bank and you will see a plus sign and words "Bank Open".

It is a talkgroup that will receive anything that comes across the system. Then you can make note of the tg's.

☐

please explain the wildcard talkgroup.

thanks marvin

http://www.radioreference.com/apps/db/?siteId=19576

Once it starts going put a wildcard tg and see what you come up with.

MThanks for the input! May I ask what frequencies you have programmed in to hear them? Control channels, etc? I can't follow what Radio Reference lists, because it depends on what area of town you're in to receive the perimeter. I live in NW Harris County...1960 and 249 area. Any frequency help would be appreciated!

I'm sorry but I just can't get a liking for HFD's Microsoft Sam dispatch hahaha. Computers can do some good things that humans can not but when they don't sound like they can pronounce the words correctly, or muffled. Bring back the human dispatchers!!

What you hear isn't the actual dispatches. That's done via data! What you hear is just for public consumption, which is why HFD doesn't care what it sounds like, and why it's FDMA. Really listen to the text being read, it's not dispatch quality, it's just a convenience to whoever is listen.

If you ever meet me, you'll hear first-hand what a good synthesizer sounds like. What you hear is free.

P.S. I'm using an HPD beat map with district numbers, comparing street locations given to name the tags.

Keep in mind the below TG's will be on 1A7 RFSS 3 (or Zone 3 in Motorola terms) site 5 ONLY. Don't try to hear them on ANY other site...unless of course you like silence.

And this note was not aimed at Greg, but the group as a whole.

They "should" have the new radios. I suspect this is a training issue.

The last thing I heard, after they played around for quite a while on 2318 trying to find some common ground, was they were heading back to the hanger where they had some handheld radios. That is going to be pretty desperate if something actually happens.

That ought to be great audio quality. They may be better off landing to use a ground unit's radio. Or, yelling really loud.

Ya know, it's funny, the HPD MA channels are clear as a bell. The HFD ones...not so much.

If I was a guy who like to listen to fire calls, I would be pretty PO'd at the current situation.

Lou

Same thing here, Lou. All my HPD groups are very clear. Some minor instances of garbling but it may when I get near my computer or other electronic device. HFD on the other hand...Microsoft Sam just does not sound good on digital lol, and when the tone goes out for dispatch, sometimes it doesn't come through as a tone and it sounds funny. I don't listen to HFD anyway...so I'm happy so far.

I'm not able to pick anything up on my PSR-800. Does anyone have it going? What am i missing? I've used the RR database and manually typed in the frequencies for the simulcast.

Alberto,
I'm not familiar with the PSR-800, so I'm not sure how the trunking is for that radio. Someone may be able to help who may have that radio. Just make sure you have the control channel (red) and the alternate blue channels as well.

From: Lou
Topic: 28383 Message: 28415

It's important to remember that if you want to pick up the Mutual Aid Dispatch channels they are only carried on the site 3-005. If you have all the sites loaded in a system, it will not generally hear them. You need to set up a new system (copy the current one) and on this new system, lock out all the sites except 3-005 (use the name to find it). Then the PSR800 will only listen to that site.

This same thing needs to be done for other digital (non-TDMA) scanners. I just got finished setting up a 796D and it sounds better than both my PSR800 and HP-1. I still can't get my Pro-96 to sound much better than R2D2 though.

Lou

From: Rudy
Topic: 28383 Message: 28417

If it helps anyone, on the RR page for the APCO P25, scroll down the system names, and find the one that says, "Houston General Government Services Simulcast - Harris County" That is the one I'm using and it's clear. Control channel is 859.9375, with 3 alternates: 858.9375, 859.2625, and 859.4375. Hope this helps!

28423. Re: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-07 20:00:16 UTC
From: Alberto Rea
Topic: 28383 Message: 28423

I can't figure it out. Am i leaving these set to P25? That's what it
defaults to on my psr 800.

Thanks
Alberto

Topic: 28383 Message: 28424

Yes.

But the whole system is P25. So what is it exactly you can't figure out and exactly what are you trying to listen to?

I'm trying to listen to HPD. I've erased everything but Site 05 and have the TG programmed even a wild card no luck.

Thanks

Well I got my 996xt to work on the city system. Thanks for the TG labels. Still not understanding my PSR-800. Next i will work on my 600 model. For the record I can not hear anything in the Sugar Land area of the city site.

Wally

From: Lou
Topic: 28383 Message: 28427

Hmm. Okay I will review what mine is like:

In EZ Scan, I have a system (I called it "Hou PW P25T",) it started out as a copy of the regular TxWARN P25 system. Make sure it is listed as "Project 25" as a type. In my case I just locked out all the sites except for 3-05 but deleting them would work also as long as the 3-05 is still available. For site frequencies it is the 4 listed as the CCh & the alts, set to NFM. On the Site Options tab, make sure you have it as Auto Fill and I have the Digital AGC On.

Moving on the to TGs. If you have already programmed the HPD channels you should have 12 of them programmed 30180 - 30191. Make sure they are assigned to a scan list that you have active.

Load it into the radio, make sure you have selected that scan list and you are good to go. This is how I have it done and it works fine.

Lou

This is not specifically for Mr. Wally, but...

If you are using the "import" function from software (be it EZScan, FreeScan or whatever) it may not work properly for you unless you ONLY import site 5 of zone (RFSS or whatever) 3.

If you import other sites you will probably lock onto one of those and never hear the "-MA" TG's.

From: Myles Barkman
Topic: 28383 Message: 28429

I wasn't even aware of site 05 but I have it programmed now and am hearing the MA TG.

So I have some questions now, keeping in mind that I have a 396xt and can only receive FDMA:

1. Would it do me any good to even program any of the other zone 3 sites besides site 5?

2. Would any FDMA traffic from Zone 1 be carried on zone 3 sites?

I have zone 3 sites programmed in under TxWARN P25 system but if there is no interoperability or shared TG between the two, I'll just create the zone 3 stuff in its own system so I can better set up groups and not clutter up my already huge TxWARN system.

From: katy_listings
Topic: 28430 Message: 28430

Hi all, so quiet today due to the P25 changeover. So, what scanner do I need to get now to hear the digital transmissions? I am only marginally tech-y so I need something easy to program. I was using the PRO-94. I guess it's a paperweight now. Thank you.

Yep it’s a scam to gather email addresses.

If you put in an email address, it will take you to the checkout where your item will no longer be in stock. (I used a bogus email)

It seems others who have used their real email found out the hard way

http://www.scambook.com/report/view/230734/SaleSavocom-Complaint-230734-for-$0.00

Stay away.

I think most people are using the PSR-800 or the PSR-600...if you can find them. I haven't tried to update my 600 for HPD....I'm not even going to try. I haven't been able to get it to pick up Montgomery County, but I think that's due more to programmer error and I haven't figured out what I've got screwed up.

Subject: [HoustonScan] Quiet scanner - P25

Hi all, so quiet today due to the P25 changeover. So, what scanner do I need to get now to hear the digital transmissions? I am only marginally tech-y so I need something easy to program. I was using the PRO-94. I guess it's a paperweight now. Thank you.

The radios are installed. I'm hearing that it was a programming issue with
the radios in the helicopters that should be resolved now.

I was finally able to hear something...LOL HPD Airport just asked all units
to turn off all radios for a few minutes.

The GRE 800 would be the best route, however it is also an expensive route.

Theresa,
Download "PSREdit 500" (30 day free trial), read your radio and send
me your file. We'll get you going.

I havent really researched it but I think everything is in fdma. All the tdma stuff thats not availible in fdma is encrypted. Unless of course you want to listen to heavy trash or park rangers.

So the hpd dispatch channels that are mode T and Mode D are in theroy patched together ?
You can only hear the dispatched channels in mode D on the general simulcast tower?

Does this make sense?

28450. RE: [HoustonScan] Quiet scanner - P25

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-07 21:46:08 UTC
From: Myles Barkman
Topic: 28430 Message: 28450

Look like plenty of TDMA non-encrypted stuff is available to listen if you have the scanner. Pretty much all the city of Houston stuff that was on the old trunk system, special events, fire training, etc.

Anything that is here with a “T” for the mode and not an “E”.

It looks like site 5 is also carrying the TDMA TG from what the scanner is telling me parked on the control channel. Just no way for me to listen to them.

-Myles

Subject: Re: [HoustonScan] Quiet scanner - P25

I havent really researched it but I think everything is in fdma. All the tdma stuff thats not availible in fdma is encrypted. Unless of course you want to listen to heavy trash or park rangers.

The GRE 800 would be the best route, however it is also an expensive route.

28451. Re: Quiet scanner - P25

From: Lou
Topic: 28430 Message: 28451

Yes. And if you lived in the Memorial Villages, you would like to listen to your PS folks, they don't simulcast in FDMA so a PSR800 comes in handy.

If I were you, I would program the known TGs that you can receive and scan only those. Having a PSR800 is useful for finding & IDing new stuff, but for just listening to HPD (or HFD) I probably will use my old BC796D. It doesn't seem to be affected by the multi-path so much.

Subject: Re: [HoustonScan] Re: Digital HPD

So the hpd dispatch channels that are mode T and Mode D are in theroy patched together ? You can only hear the dispatched channels in mode D on the general simulcast tower?

Does this make sense?

Evan Barcak
ke5yoy@...

On May 7, 2013, at 16:32, Kevin Chessher <kchessher@comcast.net> wrote:

They don't, if the TG is in FDMA (as in a "regular digital scanner" can hear it) it will be in the clear on both TDMA and FDMA.

On 5/7/2013 4:28 PM, Evan Barcak wrote:

Im so confused!

Why would they have a simulcast site of talkgroups that you can hear on a regular digital scanner, but turn around and encrypt them on the other towers?

I hope this makes sense

Evan Barcak

On May 7, 2013, at 16:19, "Myles Barkman" <kg5ai@...> wrote:

OK, I know what I must do then. So only Zone 3 site 5 will carry FDMA TG
and the rest of Zone 3 sites will be strictly TDMA.
No reason for me to make zone 3 site 5 just another site in my TxWARN
system.
So the advantage to having a TDMA capable scanner right now is that they can
pick up dispatch TG on other sites possibly closer to where they are.
Of course, they can also pick up the dog catcher and trash man stuff too.

Subject: [HoustonScan] Re: Digital HPD

The answer to both of your numbered questions is no. Only 3-05 carries any FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not carrying any traffic from any layer 1 or 2 sites. They are basically separate systems.

28461. RE: [HoustonScan] Re: Quiet scanner - P25

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-08 00:42:01 UTC
From: Scott Royall
Topic: 28430 Message: 28461

What I don't understand yet is why I’m not getting the HPD/HFD unencrypted TDMA TGs. I’m on the PS layer simulcast sites in order of their proximity to wherever I am.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Lou
Sent: Tuesday, May 07, 2013 17:03
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: Quiet scanner - P25

Yes. And if you lived in the Memorial Villages, you would like to listen to your PS folks, they don't simulcast in FDMA so a PSR800 comes in handy.

If I were you, I would program the known TGs that you can receive and scan only those. Having a PSR800 is useful for finding & IDing new stuff, but for just listening to HPD (or HFD) I probably will use my old BC796D. It doesn't seem to be affected by the multi-path so much.

The answer to both of your numbered questions is no. Only 3-05 carries any FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not carrying any traffic from any layer 1 or 2 sites. They are basically separate systems.

From: Scott Royall
Topic: 28430 Message: 28469

You are welcome. However, I need to talk about this. I am temporarily providing the feed to help people make the transition to a different way of doing business. Yet, we need to understand that it really is temporary. Starting this weekend, the feed has to return to its main function, which is to let me listen to my expensive PSR-800 without having to carry it with me. I live near West Oaks Mall, and that's my primary area of interest. I'm currently streaming all dispatch/status channels for HPD, HFD, and HCSO, and of course that's far too great a load to scan effectively. While most of that will probably remain in the scan queue-except HFD, priority is going to go to HCSO District 4 and HCCO Precinct 5, my home territory. Adjacent HPD districts will continue to be scanned.

By the way, it's a huge relief to hear that the HPD Southwest dispatcher is no longer seated next to a roaring jet engine!

Date: 2013-05-08 22:59:52 UTC
From: Scott Royall
Topic: 28383 Message: 28470

My question is, has anybody actually determined which Zone 3 sites carry the unencrypted HPD/HFD TDMA groups? Depending on Site 5 and FDMA is inherently begging to be cut off, as HPD/HFD has no long-term stake in keeping FDMA going.

The answer to both of your numbered questions is no. Only 3-05 carries any FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not carrying any traffic from any layer 1 or 2 sites. They are basically separate systems.

For the latest information on Houston area scanning

28475. Re: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-08 23:39:49 UTC
From: Kevin Chessher
Topic: 28383 Message: 28475

I misread your message, sorry about that.

Sites 1-4 and 11-16 have the TDMA HPD/HFD stuff.

On 5/8/2013 6:32 PM, Kevin Chessher wrote:

28477. RE: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-08 23:42:40 UTC
From: Scott Royall
Topic: 28383 Message: 28477

Ah-ha!

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Kevin Chessher
Sent: Wednesday, May 08, 2013 18:41
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Re: Digital HPD

Also, make sure the bandplan on the sites is set to "Auto Fill".

On 5/8/2013 6:39 PM, Kevin Chessher wrote:

I misread your message, sorry about that.

Sites 1-4 and 11-16 have the TDMA HPD/HFD stuff.

On 5/8/2013 6:32 PM, Kevin Chessher wrote:

The ONLY Zone 3 site that will carry FDMA is site 5.

I would think FMDA (for HPD anyway) would be around a a while so other agencies have a way to talk to them. But, as usual, I could be wrong.

On 5/8/2013 5:59 PM, Scott Royall wrote:

My question is, has anybody actually determined which Zone 3 sites carry the unencrypted HPD/HFD TDMA groups? Depending on Site 5 and FDMA is inherently begging to be cut off, as HPD/HFD has no long-term stake in keeping FDMA going.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Marvin Suggs

Sent: Tuesday, May 07, 2013 4:39 PM

Subject: Re: [HoustonScan] Re: Digital HPD

So the hpd dispatch channels that are mode T and Mode D are in theroy
patched together ? You can only hear the dispatched channels in mode D on
the general simulcast tower?

Does this make sense?

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:32, Kevin Chessher <kchessher@...> wrote:

They don't, if the TG is in FDMA (as in a "regular digital scanner" can hear
it) it will be in the clear on both TDMA and FDMA.

On 5/7/2013 4:28 PM, Evan Barcak wrote:

Im so confused!

Why would they have a simulcast site of talkgroups that you can hear on a
regular digital scanner, but turn around and encrypt them on the other
towers?

I hope this makes sense

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:19, "Myles Barkman" <kg5ai@...> wrote:

OK, I know what I must do then. So only Zone 3 site 5 will carry FDMA TG
and the rest of Zone 3 sites will be strictly TDMA.

No reason for me to make zone 3 site 5 just another site in my TxWARN system.
So the advantage to having a TDMA capable scanner right now is that they can pick up dispatch TG on other sites possibly closer to where they are.
Of course, they can also pick up the dog catcher and trash man stuff too.

-Myles

Subject: [HoustonScan] Re: Digital HPD

The answer to both of your numbered questions is no. Only 3-05 carries any FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not carrying any traffic from any layer 1 or 2 sites. They are basically separate systems.

Lou

Also, make sure the bandplan on the sites is set to "Auto Fill".

On 5/8/2013 6:39 PM, Kevin Chessher wrote:

I misread your message, sorry about that.

Sites 1-4 and 11-16 have the TDMA HPD/HFD stuff.

On 5/8/2013 6:32 PM, Kevin Chessher wrote:

The ONLY Zone 3 site that will carry FDMA is site 5.

I would think FMDA (for HPD anyway) would be around a a while so other agencies have a way to talk to them. But, as usual, I could be wrong.

On 5/8/2013 5:59 PM, Scott Royall wrote:

My question is, has anybody actually determined which Zone 3 sites carry the unencrypted HPD/HFD TDMA groups? Depending on Site 5 and FDMA is inherently begging to be cut off, as HPD/HFD has no long-term stake in keeping FDMA going.

Subject: Re: [HoustonScan] Re: Digital HPD

So the hpd dispatch channels that are mode T and Mode D are in theroy
patched together ? You can only hear the dispatched channels in mode D on
the general simulcast tower?

Does this make sense?

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:32, Kevin Chessher <kchessher@...> wrote:

They don't, if the TG is in FDMA (as in a "regular digital scanner" can hear
it) it will be in the clear on both TDMA and FDMA.

On 5/7/2013 4:28 PM, Evan Barcak wrote:

Im so confused!

Why would they have a simulcast site of talkgroups that you can hear on a
regular digital scanner, but turn around and encrypt them on the other
towers?

I hope this makes sense

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:19, "Myles Barkman" <kg5ai@...> wrote:

OK, I know what I must do then. So only Zone 3 site 5 will carry FDMA TG
and the rest of Zone 3 sites will be strictly TDMA.
No reason for me to make zone 3 site 5 just another site in my TxWARN
system.
So the advantage to having a TDMA capable scanner right now is that they can
pick up dispatch TG on other sites possibly closer to where they are.
Of course, they can also pick up the dog catcher and trash man stuff too.

Subject: [HoustonScan] Re: Digital HPD

The answer to both of your numbered questions is no. Only 3-05 carries any
FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not
carrying any traffic from any layer 1 or 2 sites. They are basically
separate systems.

Lou

From: Rudy
Topic: 28481 Message: 28485

Ok thanks! I missed it then lol. I'm always scanning the spectrum from 200 to about 400 MHz all the time and I have never heard any transmissions whatsoever. I'm using the stock telescopic antenna that came with the Yupiteru. It should be strong enough to raise some signals. I've had the Yup for about 3 months now and still nothing. Any ideas? Am I just missing the transmissions?

From: Theresa
Topic: 28430 Message: 28488

If I knew how, I could possibly do all of HCSO. I live to far north to effectively pick up most all of the South HPD sites, as I live almost to the Montgomery Co. line. I don't think that's what we're looking for though since it's HPD that just went on the Digital line.

Subject: RE: [HoustonScan] Re: Quiet scanner - P25

You are welcome. However, I need to talk about this. I am temporarily providing the feed to help people make the transition to a different way of doing business. Yet, we need to understand that it really is temporary. Starting this weekend, the feed has to return to its main function, which is to let me listen to my expensive PSR-800 without having to carry it with me. I live near West Oaks Mall, and that's my primary area of interest. I'm currently streaming all dispatch/status channels for HPD, HFD, and HCSO, and of course that's far too great a load to scan effectively. While most of that will probably remain in the scan queue—except HFD, priority is going to go to HCSO District 4 and HCCO Precinct 5, my home territory. Adjacent HPD districts will continue to be scanned.

By the way, it's a huge relief to hear that the HPD Southwest dispatcher is no longer seated next to a roaring jet engine!

You may just be missing the transmissions. That is a big chunk of spectrum
to search so there is a high likelihood you just never happen to search
past the right frequency at the right time.

Thank you Kevin and Eric! Yea I mostly stay in the AM mode while going through that spectrum. But I have switched to FM just in case I was missing something, because you will still hear a transmission but just not be clear as in AM mode. Too bad they don't have programming times like shortwave stations do lol. In what kHz step should I have it on to scan through on that part of AM? I usually put it on 10 kHz so it will scan slightly faster but I don't what's the proper setting for that AM spectrum. Thanks!

10 KHz will take forever and that isn't the proper spacing for Mil air. I would use 25 KHz, but even that will take a long time. Rudy <dominusvobiscum_1@hotmail.com> wrote:Thank you Kevin and Eric! Will make a note of that, Kevin, and use the 25 KHz from now on. I'm in no hurry while monitoring so I'll just wait it through. I'm sure I'll hear something sooner or later! Thanks for all your help! Have a good day!

From: dxmantx
Topic: 28494 Message: 28494

I know the GRE PSR-800 is a choice but it is hard to find and I have seen $200-$300 mark up on it. Are there better choices out there?
Thanks,
Dxman

I use a Uniden BC796D for HPD, I don't care much for HFD. I can also use my HP-1, and my PSR800 but I have given up on trying to get the Pro-96 to handle the multi-path. I need to get my BCD396T inside to get it reprogramed. Come to think of it, I don't have much else to do this evening so that is where I am heading.

Lou

I use uniden bcd396xt, 996xt, and hp-1extreme. Now, I can pick up hpd
better than hfd from work in willowbrook and home in aldine.

Also, make sure the bandplan on the sites is set to "Auto Fill".

On 5/8/2013 6:39 PM, Kevin Chessher wrote:

I misread your message, sorry about that.

Sites 1-4 and 11-16 have the TDMA HPD/HFD stuff.

On 5/8/2013 6:32 PM, Kevin Chessher wrote:

The ONLY Zone 3 site that will carry FDMA is site 5.

I would think FMDA (for HPD anyway) would be around a a while so other agencies have a way to talk to them. But, as usual, I could be wrong.

On 5/8/2013 5:59 PM, Scott Royall wrote:

My question is, has anybody actually determined which Zone 3 sites carry the unencrypted HPD/HFD TDMA groups? Depending on Site 5 and FDMA is inherently begging to be cut off, as HPD/HFD has no long-term stake in keeping FDMA going.

So the hpd dispatch channels that are mode T and Mode D are in theroy patched together ? You can only hear the dispatched channels in mode D on the general simulcast tower?

Does this make sense?

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:32, Kevin Chessher <kchessher@...> wrote:

They don't, if the TG is in FDMA (as in a "regular digital scanner" can hear it) it will be in the clear on both TDMA and FDMA.

On 5/7/2013 4:28 PM, Evan Barcak wrote:

Im so confused!

Why would they have a simulcast site of talkgroups that you can hear on a regular digital scanner, but turn around and encrypt them on the other towers?

I hope this makes sense

Evan Barcak

ke5yoy@...

On May 7, 2013, at 16:19, "Myles Barkman" <kg5ai@...> wrote:

OK, I know what I must do then. So only Zone 3 site 5 will carry FDMA TG
and the rest of Zone 3 sites will be strictly TDMA.
No reason for me to make zone 3 site 5 just another site in my TxWARN
system.

So the advantage to having a TDMA capable scanner right now is that they can pick up dispatch TG on other sites possibly closer to where they are.
Of course, they can also pick up the dog catcher and trash man stuff too.

Subject: [HoustonScan] Re: Digital HPD

The answer to both of your numbered questions is no. Only 3-05 carries any FDMA traffic all other zone 3 sites are TDMA only. And Site 3-05 is not carrying any traffic from any layer 1 or 2 sites. They are basically separate systems.

28510. RE: [HoustonScan] Re: What radio are you using to listen to HPD now?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-10 20:09:49 UTC
From: <hishy@...>
Topic: 28510 Message: 28510

That's actually not too farfetched. APX radios have multiple audio profile settings which contain different DSP, background noise, and wind noise reduction adjustment settings. HFD portables could have been optimized for fireground operation, or include the "Xtreme 1-Sided" profile which was specifically designed for firefighter radios.

?

Could it be that HFD is using a different style radio or microphone system?

?

That's odd since they are all on the same system.

28512. RE: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-10 21:02:44 UTC
From: Scott Royall
Topic: 28383 Message: 28512

Well, technically, it's all one system now. We keep replowing the same old ground.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Marvin Suggs
Sent: Friday, May 10, 2013 15:37
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Re: Digital HPD

ok thanks. i was wondering if the city was somehow using the county's sites in their system. so that answers my question

If it helps anyone, on the RR page for the APCO P25, scroll down the system names, and find the one that says, "Houston General Government Services Simulcast - Harris County" That is the one I'm using and it's clear. Control channel is 859.9375, with 3 alternates: 858.9375, 859.2625, and 859.4375. Hope this helps!

28513. Sprint Cell phone service outage.

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-11 06:02:05 UTC
From: kd5jbt
Topic: 28513 Message: 28513

My Sprint cell phone have not been working from about (May 10,2013) 11 p.m.
I called Sprint, when I said this, she asked are you in Texas? There is a wide outage in Texas. been getting calls from Houston and towns she has not heard of like College Park (maybe she meant College Station?)

Anyone else have info?

28521. DeBakey VA Medical Center

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-11 19:35:32 UTC
From: Eric C. Carlson
Topic: 28521 Message: 28521

It appears that the VA Police have transitioned to the new VAMC
trunked system as of the evening of 5/10. I can't confirm anyone else
has cut-over yet. The old analog repeaters still seem to be in use
for now. This system has about 18 talkgroups on it so far.

Some of them on the trunked system also...at the same time.

159.4725mhz repeater heard in Caldwell. Command to team rock and water search. Training exercise I think. Radio reference search says it is TXDOT but is not listed in the TXDOT page.

28524. Re: [HoustonScan] 159.4725

I show that to be VTAC14.

Closest non-TxDOT license I see is in Burnet County.

28529. RS Pro 197

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-11 22:15:03 UTC
From: RM
Topic: 28529 Message: 28529

Just wanted to pass this along to the group- I was told the Radio Shack Pro 197 will do phase 2 with the latest firmware upgrade. It stands to reason because they were being built by GRE for RS.
I haven't been able to get behind a computer today and verify this so check it out before you buy.
Hope this helps the folks that want to listen to the phase II system :)

Now, someone may THINK they do because they are listening to the FDMA
TG's on Zone/RFSS 3 site 5.

I know I'm old and don't understand these new-fangled radio systems, but
I tried this on mine and surprisingly...it didn't work.

Maybe I did something wrong though.

YMMV

From: Kevin Chessher
Topic: 28383 Message: 28537

And speaking of Harris County, this is from the ITC Radio Services website...

Since these features are now active, it is mandatory that all new radios include RADIO AUTHENTICATION and PHASE II TDMA

* Due to end of life for existing analog radio system hardware and pending changes to Federal Communication Commission (FCC) requirements , Harris County will be migrating to a pure digital Project 25 radio system by December 31, 2015. *STARTING 2016, ANALOG RADIOS WILL NO LONGER WORK ON OUR RADIO SYSTEM*

28538. Re: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-12 01:28:18 UTC
From: gjhamilton
Topic: 28383 Message: 28538

Doh!!!!!

Sent from my Verizon Wireless 4G LTE Smartphone

-------- Original message --------
From: Kevin Chessher <kchessher@comcast.net>
Date: 05/11/2013 8:17 PM (GMT-06:00)
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] Re: Digital HPD

And speaking of Harris County, this is from the ITC Radio Services website...

Since these features are now active, it is mandatory that all new radios include RADIO AUTHENTICATION and PHASE II TDMA

  * Due to end of life for existing analog radio system hardware and pending changes to Federal Communication Commission (FCC) requirements , Harris County will be migrating to a pure digital Project 25 radio system by December 31, 2015. *STARTING 2016, ANALOG RADIOS WILL NO LONGER WORK ON OUR RADIO SYSTEM*

28540. Re: DeBakey VA Medical Center

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-12 03:26:14 UTC
From: kayi4cle
Topic: 28521 Message: 28540

I never monitor this, but just checked it out for you. Heard TGIDs 16 and 32, so I guess it's still in business!

From: Eric C. Carlson
Topic: 25652 Message: 28543

I haven't noticed 937 in use on the digital side but have seen 4048.

28545. RE: [HoustonScan] Re: Digital HPD

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-12 18:36:04 UTC
From: Scott Royall
Topic: 28383 Message: 28545

And, we know ITC always guesses future FCC plans correctly, right? J In this case, though, the trend doesn't require a clairvoyant to see. It's all about cramming as many users as possible on as few frequencies as possible in congested areas.

By coincidence, I spent much of last evening defining a RFSS 2 "system" for HCSO/HCCO in my PSR-800. It's actually sites 51-53 from RFSS 1-according to RR, but they do carry the HCSO/HCCO digital groups. To me, the digital groups simply sound predictably better. No surprise there, though I do wonder how well it will do in marginal signal conditions.

28551. Scanner Radio Programming Files

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-13 15:22:01 UTC
From: elentz1
Topic: 28551 Message: 28551

Just thinking, it would be good if we had files for HPD and HFD for several of the most common receivers, PRO-197, GRE-PSR800, Uniden 996T (996XT), and the Home Patrol 1 with the most popular programs in the Files area.

Maybe one file for HPD and one for HFD so people could copy and then program their radios. I know it's a bit difficult to figure all this out with some of the explanations to those started out with 37.180, 37.260 and simular frequencies. Yep, us old farts.....

I have mine radios working but not sure others do and many will just give up.

28552. Re: Scanner Radio Programming Files

That would be awesome.. I live out in Austin county and recently started working in houston.. We have TXWARN out in my area.. but houston is a whole different animal.. it honestly looks really confusing to me haha.. I'll be staying in katy during the week and would love to add tested and working local freq's from the katy\houston area (KPD, HCSO) to my current configuration file.

Please see Paul's response in the following RR thread:

http://forums.radioreference.com/uniden-scanners/266740-viability-uniden-phase-ii-scanner.html

Sounds very promising and I can't wait to hear the details when they're announced. (Hope it includes Phase 2, etc.)

Hello. I found this forum while searching for a new radio for my dad for fathers day next month. He has had a scanner sitting on the breakfast room table for as along as I can remember. He tells me that it does not pick up the Houston channels anymore. He is retired and sits and listens to that radio all day long with a map and puts pins in it and watches the news at night to see if what he hears is on TV. I went by radio shack and the girl said that she knew that the channels had changed but she did not know what radio to use now. Can anyone here suggest a new radio my wife and I can buy him for fathers day? Thanks to all in advance. Howard.

Hi. My mom and dad have a computer but my dad has never uses it. My mom uses it so we can send her photos of the grandkids as she has email. I think the last computer my dad used was the Atari that he still has in a closet. At 86 he is not about to learn the internet or so he says.

Given that statement, if you're up to programming it via the computer for them and taking the time for upkeep, I'd suggest either the Grecom GRE 600 or GRE 800 (If you can find them). For a bit more simplicity I think the Home Patrol might work, though I don't have one of those so you'd have to get confirmation on it from someone on the list who does.

Hello. I found this forum while searching for a new radio for my dad for fathers day next month. He has had a scanner sitting on the breakfast room table for as along as I can remember. He tells me that it does not pick up the Houston channels anymore. He is retired and sits and listens to that radio all day long with a map and puts pins in it and watches the news at night to see if what he hears is on TV. I went by radio shack and the girl said that she knew that the channels had changed but she did not know what radio to use now. Can anyone here suggest a new radio my wife and I can buy him for fathers day? Thanks to all in advance. Howard.

I will verify for you, that the HP-1 will pick up the HPD channels set aside for monitoring with a standard P25 trunking scanner; however, it does require that you set it up as a separate favorites list. The HP-1 will also allow him to hear the HCSO and local constables, which if I am guessing based on your previous comments, he was not listening to.

Lou

28578. FW: Your new feed application for - Southwest Harris County

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-16 01:00:41 UTC
From: Scott Royall
Topic: 28578 Message: 28578

Oh well, doesn't look like Mr. Tidd cared for my offer since it wasn't approved. Just as well as part of me really doesn't care for RR/Broadcastify's terms of service for feed providers.

From: Scott Royall [mailto:royall@...]
Sent: Tuesday, May 14, 2013 21:01
To: 'Richard Tidd'
Subject: RE: Your new feed application for - Southwest Harris County

Ah ha. In truth Richard, the information is in the description IF you are a native. The talkgroups are on radioreference.com as well. As prior applications have mentioned, HCSO is Harris County Sheriff's Office, and HCCO is Harris County Constables' Office. I'm not one who enjoys repeating myself so I didn't in my last application.

Fort Bend County is another animal. Four talkgroups dispatch everybody and his dog (in terms of law enforcement). Perhaps only the twin cities of Rosenberg/Richmond have their own dispatch groups. FBSO, constables, and at least a dozen small towns share those four dispatch talkgroups. I probably don't even know all of them, and that's why I don't attempt listing them. As my last application says, my primary focus is Harris County.

HPD is Houston Police Department.

DPS (not even mentioned in my description, oh my) is Department of Public Safety, or, in terms you may be more used to, State Troopers.

Now, I appreciate that your attorneys have clearly put the fear of God into you regarding your potential liability, and that explains your rather draconian terms of service. What your lawyers don't yet know is that technology has once again trumped legalese at least in my area. You cannot receive tactical channels on a scanner in my area because they are encrypted. That is especially true on the digital systems, where channels can encrypt on the fly, and that makes my role much simpler than a TOS could. What your TOS does not seem to take into account is the evolving nature of voice communication on law enforcement dispatch channels.

You see, routine dispatching among the agencies I monitor is mainly done via the MDTs in the vehicles. That means the voice dispatch channels have gotten rather quiet, being used mainly for time-sensitive information. However, I've also noticed that radio discipline is relaxing gradually on those dispatch channels, and officers will sometimes say things they probably shouldn't. Do you expect your feed providers to monitor and censor every such transmission?

The bottom line here is that I'm just trying to help other scanner enthusiasts. My feed has been available for a while at

http://scannercast.conchbbs.com, but there's been a big uptick in streams over the last week. That's because HPD went digital last week, and everybody else on the system will soon have to follow. I apparently have one of relatively few scanners locally that can do TDMA. In fact, I covered the whole county for a week to help people listen while they hopefully made their own transitions. Now I'm offering it to radioreference.com to make it easier to find. You're free to accept it or decline.

Oh, it's Southwest Harris County, not Southeast. My error.

Subject: Your new feed application for - Southeast Harris County

Dear DSRoyall,

Hi

Hope you are well today!

Welcome to Broadcastify.com Live Audio

I have your new feed application for:

Southeast Harris County
Owner Username: DSRoyall
County/State: Harris, TX

I received your new feed application, however the description and or information you provided in your application is not quite enough to approve your feed at this time.

In order to help me understand your feed, I need to know what agency(s) will be on your feed, along with the frequencies and or talk groups they utilize.

If you cannot supply a complete list, please list the main agencies along with the frequencies and or talk groups they utilize.

Please do not include items like DEC, HEX, Mode, Alpha Tag, etc.

Please also include any additional States and Counties that the feed will cover.

Also, please read over and be sure that all agencies being monitored comply with the Radioreference Terms of Service (TOS) <http://wiki.radioreference.com/index.php/Feed_Provider_Terms_of_Service> . Please also see here: Law Enforcement Feeds - TOS Clarifications <http://forums.radioreference.com/live-audio-administration/202526-law-enforcement-feeds-tos-clarifications.html>

Please use proper sentence structure so I do not have to change all upper or all lower case text to look like this list form example:

Example:
This feed includes:
Home County Sheriff 455.555Mhz
Wayback Police 455.565Mhz
Home County Fire 453.250
Hopeless City EMS 155.565Mhz
Home County WA6FTL 147.550Mhz ARES Repeater

Please reply to this e-mail by May 15, 11am U.S.A. West Coast Time or I may not be able to process this application.

Please reply in English only.

Please include the requested info in the body of the replied e-mail.

Please do not change or modify the subject line or the e-mail body.

Please do not reply in all upper or all lower case.

Please do send a separate e-mail or PM with the requested info.

Please do not send or include attachments, screen shots, etc.

Please do not send radio config file or radio scan list.

Please do not refer to another site with a URL or other means with the requested info.

Please do not submit another new feed application at this time.

Thanks for your support and providing your feed on Broadcastify.com.

This is essentially an email repeater, and not all files would interest everybody.

Subject: RE: [HoustonScan] New file uploaded to HoustonScan

Can the new upload be posted to this forum as I am not going to give Yahoo access to all my information?

Thanks,

Tom Ashworth

Topic: 517 Message: 28582

I'm confused Tom, you are already a member of this group, it's in the files section, just go there and get it.

Lou

Subject: Feed

Hi,

I would really like to check out your feed, but my work computers won't allow it, citing some sort of issue with potential viruses.

When I try it on my home laptop, all I get is a blank screen. Nothing ever loads.

Any suggestions?

Thanks,

John

A “real” radio probably sounds awesome. Consumer grade scanner online, not so much.

I used to monitor all the HPD channels in case something cool happened on one of them but now I lock out everything except Special Ops, Detectives, Citywide and Southeast. Takes too much brain power for my internal DSP filter to make sense of the garble.

That's why I never understood why the radio manufacturers proclaim that digital is "clearer, and more reliable to understand" when it comes to radio communications. Now, maybe their factory radios produce that type of outcome, but as far as digital scanners, maybe not so hot. I'm still ticked off that most stations are wanting to switch to digital but I'm thinking it's only because they want to be "in the crowd" and if it sounds like future technology, it MUST be the best! NOT always true.

That's why I never understood why the radio manufacturers proclaim that digital is "clearer, and more reliable to understand" when it comes to radio communications. Now, maybe their factory radios produce that type of outcome, but as far as digital scanners, maybe not so hot. I'm still ticked off that most stations are wanting to switch to digital but I'm thinking it's only because they want to be "in the crowd" and if it sounds like future technology, it MUST be the best! NOT always true.

28607. New HFD dispatcher

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-17 15:08:30 UTC
From: speedrcr78
Topic: 28607 Message: 28607

I kinda like this new HFD dispatcher today.

28608. RE: [HoustonScan] Re: New HDP Digital Sounds Really Muffled

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-17 19:43:57 UTC
From: Scott Royall
Topic: 28586 Message: 28608

Complaints about muffled audio do have some validity. In regards to my feed, I have increased the input audio as much as is feasible. If I go any higher, I really get into distortion, and that highlights the limitations of our consumer-grade radios. Digital is digital, it’s a data stream that can carry a LOT of audio information. What we’re hearing is the product of what our radios are doing—or not—with that data stream. A $700 radio SHOULD sound much better. That means better algorithms, better compute hardware, and maybe better audio hardware. I’m listening to my own feed right now, and HFD Med 1 is way over-modulated. That tells me the AGC algorithm leaves much to be desired!

That's why I never understood why the radio manufacturers proclaim that digital is "clearer, and more reliable to understand" when it comes to radio communications. Now, maybe their factory radios produce that type of outcome, but as far as digital scanners, maybe not so hot. I'm still ticked off that most stations are wanting to switch to digital but I'm thinking it's only because they want to be "in the crowd" and if it sounds like future technology, it MUST be the best! NOT always true.

You are right. I tend to mentally swap the first two layers because Houston itself is so heavily Layer 3. In fact, CoH pretty much owns Layer 3 so any location in Harris County may be in the jurisdictions of multiple agencies operating on different layers. If you want to monitor that location on a scanner, you have to break the monolithic TxWARN system up by the layers so that the scanner will check each. This really screws up the automatic updating in EZ-Scan.

28656. TxWARN RIDs: Analog <> P25

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-05-26 18:32:31 UTC
From: Rob
Topic: 28656 Message: 28656

Are the RIDS on these systems the same for a given radio? I.e., might a single radio have one RID on the analog layer and a different RID on the P25 layer? And might one radio have a particular RID on the analog layer, but a different radio have that same RID on the P25 layer?

I'd been maintaining two different lists to put in my HP-1, but I noticed that the radios that I hear on both systems (mostly the consoles) show the same RIDs on both systems, so it'd be a lot easier to just maintain a single list.

Thanks. That'll make maintaining one list easier.

[I suppose that also implies that radios on the digital layer with IDs higher than 2^16-1 can never be on the analog layer?]

New license:
http://wireless2.fcc.gov/UlsApp/UlsSearch/license.jsp?licKey=3481630

It's for a conventional repeater on 854.5875. The frequency is listed
on RR as a frequency in the Tomball TxWARN analog site 2.

Have they changed freqs from the Radio Reference entries? Haven't heard anything from them in a few weeks and they used to come in fairly strong.

There have been some updates on RR this year. I noticed in January that they switched the main channel to a repeater with a new tone: 463.275 [141.3]. I haven't checked up on them recently but I know the train is still active on 464.55 [d 155] simplex.

I never identified a repeater on 462.575 myself. I had them with simplex on 462.575 DCS 152 but haven't heard them there in quite a while. I'm not sure if it's used at all anymore?

On a related note, setup for Summer Fest downtown appears to be using 462.575 DCS 413 (observed previously for Houston Children's Festival in April).

Topic: 4404 Message: 28697

That's the zone/bank/channel designator in the radio the call is
assigned to.

The zone is changed via a momentary push button, the bank via a
3-position toggle switch and the channel via the 16-position rotary switch.

The first few seconds were funky, but then again, it's a scanner.

Since you have a Pro96, follow this
<http://wiki.radioreference.com/index.php/Houston_Police_and_Fire_P25>
link and it should get you going.

It really is easy, so don't over think it.

Houston Red Cross was testing today on 45.86 (LLAW3 but appeared to be CSQ, no tone detected) with Transtar. There also appeared to be some related talk on 47.42 [146.2] (Red Cross) discussing frequencies of 47.50 and 47.42.

If you're asking if either radio is used on both systems, the answer is, I wouldn't have any way of knowing. But originally I asked (or intended to ask...) not whether a single radio would have the same RID on both systems, but whether a single RID would ever be used on both systems in two different radios. Practically, I was trying to figure out whether I could maintain a single RID list and use it in both systems. The answer would seem to be no.

If a radio on 2318 has the same id as one on 1A7 then someone made an
oops. Both system id's are actually part on the same "system" and use
the same database for radios id's.

28749. Houston area federal activity

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-06-15 22:31:52 UTC
From: Eric C. Carlson
Topic: 28749 Message: 28749

Notable or rare federal activity in Houston during the last week:

131.175 ARINC En Route Service on 6/12, Repatriate 802 (ICE) en route to Alexandria in phone patch with operations at "WAL" and also requesting a SELCAL check for HKMS.

157.175 Marine Ch. 83A on 6/9, presumed USCG aircraft calling other unit (unheard) advising they will make contact on COTHEN.

163.1125 NAC 496 simplex on 6/10, clear voice, unknown agency

165.2375 [100.0] CBP Net 1 on 6/10, ICE agent calling Charlie-100 advising someone stole his 2 cell phones from his car while he was pumping gas in the Greenspoint area; he requested Charlie-100 notify HPD to respond because he has no phones to use.

168.8375 NAC 293 CBP Air 1 simplex on 6/10 and 6/13, aerial surveillance

I'm not listening to them and I can't. There are other ways to know what channels are being used, such as monitoring unencrypted channels and monitoring trunked system talkgroup activity.

Interesting on 163.1125

Typically used with $169 for ICE NAT-Tac 3

I have only seen $496 and that was from Indiana
with 170.7875 being the output

28779. 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-06-19 22:06:34 UTC
From: Rudy
Topic: 28779 Message: 28779

I live near 1960 and Jones Road, and I'm receiving Harris County Constables (Pct 4) on 460.610 MHz. I'm hearing them "limo charlie" on my Yupiteru MVT-7100 with an external scanner antenna. Also, on a Baofeng UV-5R, but barely audible on the Pro-96 though, cutting in and out.
I know they are only on 800 MHz, so not sure if they are relaying on 460, or this is just a major bleed-over thanks to the sensitivity of the Yupiteru. However, haven't noticed it previously.
Appreciate any input. Happy Scanning!

Well it may be 460.6125...the audio just sounded clearer on 610, which is a valid frequency on the Yupiteru.

Topic: 28779 Message: 28783

Yea, that's why I'm thinking it's just a major case of bleed-over from the repeater out here. I have more "birdies" on this Yupiteru than there are in the forests around the world. Too sensitive.

Except that they aren't on "a repeater", they are trunked, so they are on multiple repeaters.

And if you hear it on multiple radios of different manufacture, it must really be there.

Maybe time will permit a road trip that way soon.

It is interesting. And it is only Pct. 4 I'm receiving. Just as if I had it on trunking radio and had their ID on hold. I will keep monitoring and see what happens.

28786. PRO 96 programing assistance

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-06-20 01:46:13 UTC
From: Marty Goodpasture
Topic: 28786 Message: 28786

I currently have Houston site 3-05 programmed and working on my 996XT and I am trying to program it into my PRO 96, Using Win 96 I have the frequencies programed in but all i get is static, any assistance would be appreciated.

Marty

Does the 96 work otherwise? As in NWS, DPS or something like that?

From: Marty Goodpasture
Topic: 28786 Message: 28795

yes everything else works fine as it ever has, DPS, HPD main dispatch on UHF, all of the old 2318 systems that I have had programmed for sometime all work, I am guessing I have either the re banded freqs entered wrong or something along that line, works as if it can't find the CC. all I get is broken squelch.

Marty

From: Marty Goodpasture
Topic: 28786 Message: 28801

OK hate to admit this but with your assistance I was able to make it work, took out the re banded settings as you recommended to, uploaded program and still didn't work, stared at it for a few minutes and realized that I had two of the frequencies set at FM and not as MOT. am now receiving in open mode, will program in TG over the weekend and move on, thanks much for your assistance.

Do you have it set to rebanded? If so, undo that.

On 6/20/2013 8:12 PM, Marty Goodpasture wrote:

yes everything else works fine as it ever has, DPS, HPD main dispatch on UHF, all of the old 2318 systems that I have had programmed for sometime all work, I am guessing I have either the re banded freqs entered wrong or something along that line, works as if it can't find the CC. all I get is broken squelch.

Does the 96 work otherwise? As in NWS, DPS or something like that?

On 6/19/2013 8:46 PM, Marty Goodpasture wrote:

I currently have Houston site 3-05 programmed and working on my 996XT and I am trying to program it into my PRO 96, Using Win 96 I have the frequencies programed in but all i get is static, any assistance would be appreciated.

And thanks for letting us know you got it going and what it was. It's aggravating when you are helping someone and they just disappear.

And I was hoping you couldn't hear it anymore because I couldn't either.

Kevin Chessher <kchessher@comcast.net> wrote:Just the mention of me trying to find it caused them to cease, pretty awesome!
Rudy <dominusvobiscum_1@hotmail.com> wrote:

To be honest, I've listened off and on last night, and today, and not a peep. I thought about listening simultaneously on my Pro-96 but sometimes it doesn't receive anything when I hear them on the Yupiteru.

But that doesn't mean they didn't get a Homeland Security grant to buy some.

Kevin Chessher <kchessher@comcast.net> wrote:That's possible, but on-street coverage should be good enough that they wouldn't need something like that.
Myles Barkman <kg5ai@comcast.net> wrote:

haha...yea not sure what it was all about. I still have it in memory on the Yupiteru so I'm not giving up on it yet. It's one radio mystery I want to further find out about...if it ever comes back. :)

The Aquarium added a repeater on 462.0375 [141.3] also. This has been
around since at least January I think but the license just went through
this week.

What you set, depends on the scanner. The Pro-96 (subject of this thread) doesn't have a DG setting. For either a Motorola system or a Project 25 system, the proper setting on a Pro-976 is MOT.

On another note, I am happy to see someone able to use the Pro-96 on the city MA channels, I can not get mine to handle the multi-path signals where I am (close to Keith Harrow and Fry Rd).

The FCC has been so slow as of late.

My Narrowbanding filed in December went thru in early May

However a practice we are seeing more and more, is the Frequencies going Active, as soon as the Application is filed. YMMV

Guaranteed it's a repeater. 155.58/233.6 is the output. 153.95 may be the input.

Basic narrowbanding should still be going through very quickly. The last new license I filed in recent months took 5 months to be approved. Light mods are taking upwards of a couple months.

Subject: Re: [HoustonScan] Downtown Aquarium

There have been some updates on RR this year. I noticed in January that they switched the main channel to a repeater with a new tone: 463.275 [141.3]. I haven't checked up on them recently but I know the train is still active on 464.55 [d 155] simplex. -Eric On Thu, May 30, 2013 at 8:06 AM, yerry <yerry_yang_1@...> wrote: Have they changed freqs from the Radio Reference entries? Haven't heard anything from them in a few weeks and they used to come in fairly strong.

28825. Mystery Antenna

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-06-24 22:28:43 UTC
From: Rudy
Topic: 28825 Message: 28825

Hey all! I created a new album in the photos section called "Mystery Antennas". I added the first one because I'm hoping someone out there knows what this antenna is used for.
I took the picture inside Kingwood Memorial Hospital in Kingwood, Texas about a month ago while my grandfather was undergoing hip surgery. These ceiling mounted antennas are located in each wing of the hospital, and spaced about every 4 feet of one another.
I did note other "box-type" ceiling mounted gadgets that could've been other types of transmitting devices, but this really caught my eye.
If anyone knows what it could be used for, or you just want to give your input and guess, feel free.
Thank you!

It reminds me of one of those old-fashioned lawn sprinklers hanging upside down! (But with antennas instead of sprinkler heads.)

Date: 2013-06-25 02:38:56 UTC
From: Eric C. Carlson
Topic: 28830 Message: 28830

Some IAH logs from a brief visit today:
464.775 R [d 315] Air France and KLM operations (DCS changed from Northwest/KLM days)
461.9125 R? [127.3] close call hit and voice, unknown use
460.825 R [d 115] airline operations (new DCS for Delta or another user?)

I've also made a lot of updates to the aviation band "company frequencies" recently:
http://www.radioreference.com/apps/db/?aid=1114

Well, to each his own poison. One radio would be woefully inadequate in trying to cover even just the eight HPD primary dispatch channels. You either copy what the media and E-Tag wreckers do and install multiple radios, or you get smart and only monitor the areas that matter to you.

My feed is labeled "Southwest Harris County" for good reason.

They referenced multiple other channels but this was the only one I could identify. They also said they had interference on channel 1 so the parade was moving to channel 5. 469.4875 seemed to be specific to the festival and not the parade.

From: Josh Kaufman
Topic: 28825 Message: 28880

Those look like a variation of the Hugs tags that they put on infants.
http://www.innovative-medical.com/Infantsecurity/

We have a hugs system at the hospital I work at. Every now and then it will malfunction and it gets quite annoying ;).

Also the ceiling mounted "boxes" were either for the wireless phone system (spectralink) or the halter/telemetry monitors (spacelabs)

Hope this helps

I want to thank everyone for their input on that mystery antenna. I'm feeling the telemetry of some sort is the conclusion of the use of the antenna. All I know is that while my grandfather was in that hospital, I couldn't receive hardly any transmissions but the Bush Airport towers and planes because I was like 2 miles from the airport. So yes, whatever type of radio/telemetry transmissions that hospital uses will clearly overpower a radio scanner for sure.
Thanks again for all your suggestions. I hope to add more "mystery antennas" to the photo album if/when I come across them. Feel free to add your own to the album, as well!
Happy scanning all! Happy 4th of July and make it all safe!

A Pro-96 cannot trunk track in the 700 MHz spectrum. It can receive the frequencies, but the table entries fail the internal programing and it cannot order a 700 MHz frequency. It was built before there were any trunking systems in the 700 MHz spectrum.

28894. The death of scanner monitoring...

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-02 17:58:25 UTC
From: Rudy
Topic: 28894 Message: 28894

I don't mean to sound too angry by getting my emotions out on the hobby of scanner listening, but I really need to vent.

I'm having a difficult time coping with the idea that many transmissions are going digital now, and with the possibility of most of the law enforcement and other public service departments going encrypted. What is happening to this long-time passion for listening to the scanner and hearing interesting things???

It's come to the point where, lately, I'm only interested in listening to the aircraft and shortwave bands because they are about the only transmissions that seem to only wish to stay on analog. I've been a shortwave listener for many years, and love hearing the utility stations, marine radios, international aircraft routes, etc. and all the other USB/LSB transmissions. And while I do have the Pro-96 that does monitor digital transmissions, I'm finding it harder to tolerate all those garbled messages that also cut in and out. I'm also becoming annoyed at scanning through the bands, especially the UHF bands, and hearing nothing but robot sounds, beeps and squeals from trunked systems!! It's getting unreal, my friends! And it's not that programming trunked radio systems into a scanner is difficult, it's just that the technology is getting more precise, which causes the listening equipment to become more technical AND expensive.

While I will not be selling any of my scanners in the near future, it is a choice I just may consider when everything becomes more inoperable due to radio systems wanting to become more complex and sophisticated.

In the mean time, I'll continue to enjoy my shortwave radio while I have the chance just in case those bands decide to be digitized and/or encrypted.

Those with Phase 2 capability be sure and check the Wiki link below for updated usage assignments.

And thanks to Eric for updating this!

From: briand
Topic: 28910 Message: 28910

https://play.google.com/store/apps/details?id=ix.com.android.VirtualWalkieTalkie&feature=search_result

Virtual walkie is nice it is close to having a real walkie talkie I have the paid version I like having the privacy codes so you do not have to deal with the really rude people

https://play.google.com/store/apps/details?id=ix.com.android.VirtualWalkieTalkie&feature=search_result

CB Radio is decent a lot less rude people and you can kinda select the range you want so you can only talk to people in your area.

Maybe we could start a chat room with Virtual Walkie with everyone in this Yahoo Group

It looks like they have the same channel plan as last year but of course the talkgroup IDs are different. They're using a combination of Special Events and Code Enforcement talkgroups plus the Mayor's Office talkgroup.

You can listen to HPD Citywide on site 03-05 in FDMA and listen to how the users sound, keeping in mind you are using a scanner and they are using semi-real radios.

On TxWARN System 1A7, program JUST the 3-005 Site (Houston General Gov't. Services Simulcast). Here's the link, and scroll down:
http://www.radioreference.com/apps/db/?sid=4563

On my Pro-106 I only entered the 4 control channels and it works fine (same thing for my Pro-96). HTH!

28946. RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 01:54:40 UTC
From: Rudy Ulloa
Topic: 28779 Message: 28946

To be honest, I've been listening more to just AM band....CB, shortwave, etc....I'm starting to get burned out on all the bleeps, robot sounds, trunked radio noises, etc. I wrote a topic about it on the forum about how the scanner hobby is starting to be wiped out due to digital and encryption taking over. Yes, there are digital scanners but the more technical and precise these communications become, the higher the prices are going to be for the scanners that must be made to receive these broadcasts. Just another way our government is taking our freedoms away from us, and getting us under "their control".

28947. RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 02:41:07 UTC
From: Scott Royall
Topic: 28779 Message: 28947

Sounds more like sour grapes to me. Are you saying that the FCC doesn☐t have the obligation to somehow cram in all the users who want to use what is a finite spectrum? Read the FCC charter. Are you saying those users don☐t have the right☐with the FCC☐s approval☐to encrypt? A few even have a duty to encrypt, but the technology wasn't very useful until now. Now it finally is close to reliable, and some of us voyeurs are screaming.

Switching subjects slightly, scannercast.conchbbs.com is presently configured to monitor all HPD and HCSO dispatch channels. It won☐t stay that way long, but I challenge people like briand to listen to it on a busy day and keep their sanity. Go ahead, try it. I suppose I☐ll restore the feed to just my area and adjacent jurisdictions next weekend, but I wanted to give those few exactly what they think they want.

28949. RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 02:52:29 UTC
From: Rudy Ulloa
Topic: 28779 Message: 28949

Mr. Royall you're the reason why I'm about to leave this group anyway. I have heard nothing but criticism and
negative comments from your side since I've joined. Seems that you try to get across that you're some kind of
king of radio communications or something. You can continue to be that way, but I don't like joining groups that
have people like you in it. So farewell to all.

Sounds more like sour grapes to me. Are you saying that the FCC doesn’t have the obligation to somehow cram in all the users who want to use what is a finite spectrum? Read the FCC charter. Are you saying those users don’t have the right—with the FCC’s approval—to encrypt? A few even have a duty to encrypt, but the technology wasn't very useful until now. Now it finally is close to reliable, and some of us voyeurs are screaming.
Switching subjects slightly, scannercast.conchbbs.com is presently configured to monitor all HPD and HCSO dispatch channels. It won’t stay that way long, but I challenge people like briand to listen to it on a busy day and keep their sanity. Go ahead, try it. I suppose I’ll restore the feed to just my area and adjacent jurisdictions next weekend, but I wanted to give those few exactly what they think they want.

To be honest, I've been listening more to just AM band....CB, shortwave, etc....I'm starting to get burned out on all the bleeps, robot sounds, trunked radio noises, etc. I wrote a topic about it on the forum about how the scanner hobby is starting to be wiped out due to digital and encryption taking over. Yes, there are digital scanners but the more technical and precise these communications become, the higher the prices are going to be for the scanners that must be made to receive these broadcasts. Just another way our government is taking our freedoms away from us, and getting us under "their control".

28950. RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 03:00:14 UTC
From: Scott Royall
Topic: 28779 Message: 28950

Roger that. Wonder if Rudy notices that the actual users are also paying big bucks.

Subject: RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

I knew last year so I prepped and got a psr 800... If you didn't its not anyone's fault...

On Jul 7, 2013 7:41 PM, "Scott Royall" <royall@...> wrote:

Sounds more like sour grapes to me. Are you saying that the FCC doesn☐t have the obligation to somehow cram in all the users who want to use what is a finite spectrum? Read the FCC charter. Are you saying those users don☐t have the right☐with the FCC☐s approval☐to encrypt? A few even have a duty to encrypt, but the technology wasn't very useful until now. Now it finally is close to reliable, and some of us voyeurs are screaming.

Switching subjects slightly, scannercast.conchbbs.com is presently configured to monitor all HPD and HCSO dispatch channels. It won☐t stay that way long, but I challenge people like briand to listen to it on a busy day and keep their sanity. Go ahead, try it. I suppose I☐ll restore the feed to just my area and adjacent jurisdictions next weekend, but I wanted to give those few exactly what they think they want.

Subject: RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

To be honest, I've been listening more to just AM band....CB, shortwave, etc....I'm starting to get burned out on all the bleeps, robot sounds, trunked radio noises, etc. I wrote a topic about it on the forum about how the scanner hobby is starting to be wiped out due to digital and encryption taking over. Yes, there are digital scanners but the more technical and precise these communications become, the higher the prices are going to be for the scanners that must be made to receive these broadcasts. Just another way our government is taking our freedoms away from us, and getting us under "their control".

Any update? Have you heard it anymore?

On 6/21/2013 9:53 PM, Rudy wrote:

haha...yea not sure what it was all about. I still have it in memory on the Yupiteru so I'm not giving up on it yet. It's one radio mystery I want to further find out about...if it ever comes back. :)

28951. Re: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 03:01:26 UTC
From: Brian Martin
Topic: 28779 Message: 28951

Hasta la vista. Scott brings great info to the group. If you can't stand the comments please hit that unsubscribe button at the bottom.

Please don't target individual members of the group. Scott, Kevin, and a few other people bring great knowledge to the group. Some of these guys are Motorola engineers (or at least should be).

If you want to be involved we (I hope I speak for the group) would love to have you. If you don't, please leave.

28952. RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 03:03:04 UTC
From: Scott Royall
Topic: 28779 Message: 28952

73s.

Some provide services while other complain.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Rudy Ulloa

Subject: RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

Mr. Royall you're the reason why I'm about to leave this group anyway. I have heard nothing but criticism and
negative comments from your side since I've joined. Seems that you try to get across that you're some kind of
king of radio communications or something. You can continue to be that way, but I don't like joining groups that
have people like you in it. So farewell to all.

Subject: RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

I knew last year so I prepped and got a psr 800... If you didn't its not anyone's fault...

On Jul 7, 2013 7:41 PM, "Scott Royall" <royall@...> wrote:

Sounds more like sour grapes to me. Are you saying that the FCC doesn☐t have the obligation to somehow cram in all the users who want to use what is a finite spectrum? Read the FCC charter. Are you saying those users don☐t have the right☐with the FCC☐s approval☐to encrypt? A few even have a duty to encrypt, but the technology wasn't very useful until now. Now it finally is close to reliable, and some of us voyeurs are screaming.

Switching subjects slightly, scannercast.conchbbs.com is presently configured to monitor all HPD and HCSO dispatch channels. It won☐t stay that way long, but I challenge people like briand to listen to it on a busy day and keep their sanity. Go ahead, try it. I suppose I☐ll restore the feed to just my area and adjacent jurisdictions next weekend, but I wanted to give those few exactly what they think they want.

Subject: RE: [HoustonScan] Re: 460.610 - Constables Pct. 4

To be honest, I've been listening more to just AM band....CB, shortwave, etc....I'm starting to get burned out on all the bleeps, robot sounds, trunked radio noises, etc. I wrote a topic about it on the forum about how the scanner hobby is starting to be wiped out due to digital and encryption taking over. Yes, there are digital scanners but the more technical and precise these communications become, the higher the prices are going to be for the scanners that must be made to receive these broadcasts. Just another way our government is taking our freedoms away from us, and getting us under "their control".

Any update? Have you heard it anymore?

On 6/21/2013 9:53 PM, Rudy wrote:

haha...yea not sure what it was all about. I still have it in memory on the Yupiteru so I'm not giving up on it yet. It's one radio mystery I want to further find out about...if it ever comes back. :)

28953. Re: [HoustonScan] Re: 460.610 - Constables Pct. 4

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 03:04:08 UTC
From: Brian Martin
Topic: 28779 Message: 28953

I just defended that. Scott, Kevin, Miles, Josh, we wouldn't get any info if it wasn't for y'all. I know I am leaving people out but this group survives on people who know what's going on and those people help everyone else.

I'm off my soapbox!

> To be honest, I've been listening more to just AM band....CB, shortwave, etc....I'm starting to get burned out on all the bleeps, robot sounds, trunked radio noises, etc. I wrote a topic about it on the forum about how the scanner hobby is starting to be wiped out due to digital and encryption taking over. Yes, there are digital scanners but the more technical and precise these communications become, the higher the prices are going to be for the scanners that must be made to receive these broadcasts. Just another way our government is taking our freedoms away from us, and getting us under "their control".

Two weeks ago. Another POS reporting by (IMHO) the worst news station in the city.

When the I-Team report aired, someone in this group remarked that the problem referred to actually predated the whole switch to trunking. Now this article seems to suggest that trunking is the problem. Let's think about the overall situation for a moment. Isn't it true that HTs in general make for pretty lousy transmitters? Of course they do, and that's because there are so many physical factors going against them. I know from personal experience that there are places in the Galleria and the tunnels where even the best high performance scanners stop receiving. I can't imagine hoping to get a signal out of those RF dark spots using a rubber duck antenna. Sorry, it just isn't going to happen until we can use subspace communications. J All we can do currently is take steps to shrink those "dark" spots as much as feasible.

Of course it is also true that going from 150 MHz to ultimately >700 MHz seriously changes how signals propagate. They go from acting mostly like sound waves to ricocheting around like light. Either one of these models can be used to minimize RF dark spots, but they require different approaches. It's further true that analog signals degrade more gracefully than digital. A weak analog signal is noisy but intelligible; whereas, a weak digital signal-even with error correction-is useless after you lose more than a few bits. Encryption raises the bar even higher because it turns the data into a pseudo-random stream of bits almost impossible to intelligently predict and correct.

All of this would seem to argue against digital trunking. Yet, the cellular industry has managed to achieve the feat for several years, and digital trunking is little more than a simplified and specialized variation of cellular technology. Naturally, I'll understand if AT&T customers wildly dispute how well cellular works, but that's because they have always been cheated. As a Verizon Wireless customer, I can genuinely say I've encountered damned few places where my phone doesn't work. Even the deepest bowels of the Galleria aren't an issue, likely because Verizon realizes that a dropped call equates to lost income. Anyway, my point is that, if a dumb milliwatt phone can be supported to that extent, a five-watt HT with a rubber duck is far less of a challenge.

Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls "femtocells." Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble

mayday call. The master would also be the gateway to the radio world beyond the incident site.

This sort of solution wouldn't have been possible even in January, but digital trunking-specifically TDMA-really changes the game. I suspect the trucks already have the hardware necessary. It may be little more than developing additional software for the MDT laptops to manage the radios.

I would lean more towards a DAS
<http://en.wikipedia.org/wiki/Distributed_antenna_system>. If done
properly, like two I was personally involved in (Reliant Park and MD
Anderson), they work great. If not done properly (I won't mention names,
but is was a large airport in town) they not only don't work but cause
problems for other users.

From: Steve
Topic: 28900 Message: 28958

There were quite a few HPD cops out at the Freedom Over Texas downtown & at least a dozen said to me(after asking) that the radios they carry have bad reception. One added he hates them b/c they get caught on seat belts b/c the antennas don't bend and frequently break. I'd say they were a foot long. One also added that the batteries don't last as long as their old ones.
Two HFD bike patrols said they can't hear the whole message at times.

They were all friendly about sharing their experiences with me the new system which I thought was kinda odd.

That seems odd as the system supposedly passed the coverage test with
flying colors.

True, but then you have to buy a DAS for every troublesome site around town. What about the places you didn't know about until you have an incident there?

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Kevin Chessher

Encryption raises the bar even higher because it turns the data into a pseudo-random stream of bits almost impossible to intelligently predict and correct.

All of this would seem to argue against digital trunking. Yet, the cellular industry has managed to achieve the feat for several years, and digital trunking is little more than a simplified and specialized variation of

cellular technology. Naturally, I'll understand if AT&T customers wildly dispute how well cellular works, but that's because they have always been cheated. As a Verizon Wireless customer, I can genuinely say I've encountered damned few places where my phone doesn't work. Even the deepest bowels of the Galleria aren't an issue, likely because Verizon realizes that a dropped call equates to lost income. Anyway, my point is that, if a dumb milliwatt phone can be supported to that extent, a five-watt HT with a rubber duck is far less of a challenge.

Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls "femtocells." Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble mayday call. The master would also be the gateway to the radio world beyond the incident site.

This sort of solution wouldn't have been possible even in January, but digital trunking-specifically TDMA-really changes the game. I suspect the trucks already have the hardware necessary. It may be little more than developing additional software for the MDT laptops to manage the radios.

I would lean more towards a DAS <http://en.wikipedia.org/wiki/Distributed_antenna_system> . If done properly, like two I was personally involved in (Reliant Park and MD Anderson), they work great. If not done properly (I won't mention names, but is was a large airport in town) they not only don't work but cause problems for other users.

On 7/8/2013 2:44 PM, Scott Royall wrote:

Zone 3 (CoH) of system 1A7 has 41 sites on the Public Safety layer (and
7 on the PW layer).

Well, technically it's not 41 "sites", so I'll amend that to 41 subsites.

I would lean more towards a DAS <http://en.wikipedia.org/wiki/Distributed_antenna_system> . If done properly, like two I was personally involved in (Reliant Park and MD Anderson), they work great. If not done properly (I won't mention names, but is was a large airport in town) they not only don't work but cause problems for other users.

On 7/8/2013 2:44 PM, Scott Royall wrote:

When the I-Team report aired, someone in this group remarked that the problem referred to actually predated the whole switch to trunking. Now this article seems to suggest that trunking is the problem. Let’s think about the overall situation for a moment. Isn’t it true that HTs in general make for pretty lousy transmitters? Of course they do, and that's because there are so many physical factors going against them. I know from personal experience that there are places in the Galleria and the tunnels where even the best high performance scanners stop receiving. I can't imagine hoping to get a signal out of those RF dark spots using a rubber duck antenna. Sorry, it just isn't going to happen until we can use subspace communications. J All we can do currently is take steps to shrink those ”dark” spots as much as feasible.

Of course it is also true that going from 150 MHz to ultimately >700 MHz seriously changes how signals propagate. They go from acting mostly like sound waves to ricocheting around like light. Either one of these models can be used to minimize RF dark spots, but they require different approaches. It’s further true that analog signals degrade more

gracefully than digital. A weak analog signal is noisy but intelligible; whereas, a weak digital signal—even with error correction—is useless after you lose more than a few bits. Encryption raises the bar even higher because it turns the data into a pseudo-random stream of bits almost impossible to intelligently predict and correct.

All of this would seem to argue against digital trunking. Yet, the cellular industry has managed to achieve the feat for several years, and digital trunking is little more than a simplified and specialized variation of cellular technology. Naturally, I'll understand if AT&T customers wildly dispute how well cellular works, but that's because they have always been cheated. As a Verizon Wireless customer, I can genuinely say I've encountered damned few places where my phone doesn't work. Even the deepest bowels of the Galleria aren't an issue, likely because Verizon realizes that a dropped call equates to lost income. Anyway, my point is that, if a dumb milliwatt phone can be supported to that extent, a five-watt HT with a rubber duck is far less of a challenge.

Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls "femtocells." Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble mayday call. The master would also be the gateway to the radio world beyond the incident site.

This sort of solution wouldn't have been possible even in January, but digital trunking—specifically TDMA—really changes the game. I suspect the trucks already have the hardware necessary. It may be little more than developing additional software for the MDT laptops to manage the radios.

Zone 3 (CoH) of system 1A7 has 41 sites on the Public Safety layer (and 7 on the PW layer).

Well, technically it's not 41 "sites", so I'll amend that to 41 subsites.

> Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls “femtocells.” Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble mayday call. The master would also be the gateway to the radio world beyond the incident site.

28974. Portable antenna array at Prescott, AZ

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-08 22:27:30 UTC
From: B Perkins
Topic: 28974 Message: 28974
Attachments: 1 described; binary payloads are missing from this source WARC

Tomorrow is a very big memorial funeral service for the 19 fallen firefighters who died last week in the Yarnell fire in Arizona. A lot of dignitaries including Biden along with the media are present. My brother lives there, and he sent me a picture of a large antenna array that has been erected in Prescott. It is set up along side a white trailer with portable power generators. The array appears to possibly be cell phone related, but I'm not sure. If it is cell phone related, would it be for Homeland Security reasons, or do they do things like this just to handle heavy cell traffic?

What "problem" are we referring to? I can guarantee coverage is many
times better than what they had.

Going back to/staying on UHF wouldn't alleviate the capacity problem
both HFD and HPD had. The only place to get enough frequencies was 700
and even there only TDMA gave them the capacity.

And no, P25/trunking/TDMA isn't the answer to everything, but they had
to do something.

I would lean more towards a DAS <http://en.wikipedia.org/wiki/Distributed_antenna_system> . If done properly, like two I was personally involved in (Reliant Park and MD Anderson), they work great. If not done properly (I won't mention names, but is was a large airport in town) they not only don't work but cause problems for other users.

On 7/8/2013 2:44 PM, Scott Royall wrote:

When the I-Team report aired, someone in this group remarked that the problem referred to actually predated the whole switch to trunking. Now this article seems to suggest that trunking is the problem. Let’s think about the overall situation for a moment. Isn’t it true that HTs in general make for pretty lousy transmitters? Of course they do, and that's because there are so many physical factors going against them. I know from personal experience that there are places in the Galleria and the tunnels where even the best high performance scanners stop receiving. I can't imagine hoping to get a signal out of those RF dark spots using a rubber duck antenna. Sorry, it just isn't going to happen until we can use subspace communications. J All we can do currently is take steps to shrink those ”dark” spots as much as feasible.

Of course it is also true that going from 150 MHz to ultimately >700 MHz seriously changes how signals propagate. They go from acting mostly like sound waves to ricocheting around like light. Either one of these models can be used to minimize RF dark spots, but they require different approaches. It’s further true that analog signals degrade more gracefully than digital. A weak analog signal is noisy but intelligible; whereas, a weak digital signal—even with error correction—is useless after you lose more than a few bits. Encryption raises the bar even higher because it turns the data into a pseudo-random stream of bits almost impossible to intelligently predict and correct.

All of this would seem to argue against digital trunking. Yet, the cellular industry has managed to achieve the feat for several years, and digital trunking is little more than a simplified and specialized variation of cellular technology. Naturally, I’ll understand if AT&T customers wildly dispute how well cellular works, but that's because they have always

been cheated. As a Verizon Wireless customer, I can genuinely say I’ve encountered damned few places where my phone doesn’t work. Even the deepest bowels of the Galleria aren't an issue, likely because Verizon realizes that a dropped call equates to lost income. Anyway, my point is that, if a dumb milliwatt phone can be supported to that extent, a five-watt HT with a rubber duck is far less of a challenge.

Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls “femtocells.” Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble mayday call. The master would also be the gateway to the radio world beyond the incident site.

This sort of solution wouldn't have been possible even in January, but digital trunking—specifically TDMA—really changes the game. I suspect the trucks already have the hardware necessary. It may be little more than developing additional software for the MDT laptops to manage the radios.

Tomorrow is a very big memorial funeral service for the 19 fallen firefighters who died last week in the Yarnell fire in Arizona. A lot of dignitaries including Biden along with the media are present. My brother lives there, and he sent me a picture of a large antenna array that has been erected in Prescott. It is set up along side a white trailer with portable power generators. The array appears to possibly be cell phone related, but I'm not sure. If it is cell phone related, would it be for Homeland Security reasons, or do they do things like this just to handle heavy cell traffic?

And the backhaul is probably the dish antenna, more than likely
pointing to a permanent site in the area.

And I set up a lot of them in New Orleans (unfortunately) after Katrina.

It was more fun setting up the SatCoWs, basically a COW with a satellite backhaul link.

Katrina was fun, not sure I'd want to do it again though. One memory (of many) that sticks with me is flying down the road between Baton Rouge and New Orleans in our trucks around 95 MPH and have law enforcement move over for us. We HAD to get a SatCoW setup at the aquarium due to most of the Feds using Nextel at the time and they were screaming for coverage.

What "problem" are we referring to? I can guarantee coverage is many times better than what they had.

Going back to/staying on UHF wouldn't alleviate the capacity problem both HFD and HPD had. The only place to get enough frequencies was 700 and even there only TDMA gave them the capacity.

And no, P25/trunking/TDMA isn't the answer to everything, but they had to do something.

And I set up a lot of them in New Orleans (unfortunately) after Katrina.

It was more fun setting up the SatCoWs, basically a COW with a satellite backhaul link.

Katrina was fun, not sure I'd want to do it again though. One memory (of many) that sticks with me is flying down the road between Baton Rouge and New Orleans in our trucks around 95 MPH and have law enforcement move over for us. We HAD to get a SatCoW setup at the aquarium due to most of the Feds using Nextel at the time and they were screaming for coverage.

Tomorrow is a very big memorial funeral service for the 19 fallen firefighters who died last week in the Yarnell fire in Arizona. A lot of dignitaries including Biden along with the media are present. My brother lives there, and he sent me a picture of a large antenna array that has been erected in Prescott. It is set up along side a white trailer with portable power generators. The array appears to possibly be cell phone related, but I'm not sure. If it is cell phone related, would it be for Homeland Security reasons, or do they do things like this just to handle heavy cell traffic?

Bob

Required building testing and coverage acceptance testing. You can't test every structure in the city for 95% portable on belt/3.4 DAQ/-20dB/whatever, but you can test a single structure in every grid square and get pretty close.

I also heard the 60-day burn-in phase expired today. Start watching out for those pallets of Sabers on Public Surplus!

Going interior (on a hot call) on a trunking system is foolish to begin with. They should utilize simplexes when simplexes will work. They can argue amongst themselves whether it should be digital or analog. No one wins that Ford/Chevy argument.

to Daysand,

I responded to your PM but it came back as undeliverable. Basically I said that to hear HPD you need to select only Site 3-005 (there are several site 3s). I don't have Win500 and can't help you with that or how to import from RR, but I'm sure someone here can help or may even have a file they can send you. Hope you get it working soon!

I remember when W I-10 VFD was on Borgnet. They had a direct, non-repeater frequency that they could use at big fires, but usually stayed on the TRS. But, besides the cost of upgrading to the new digital system and rebanding of the radios, and the busy signals they had at some of the scenes, I figure the reliability of the UHF system they now use was a big factor in going back to the reliability of UHF conventional. And, having the same command center for their primary mutual aid agency must have been a big plus in their decision.

I would lean more towards a DAS. If done properly, like two I was personally involved in (Reliant Park and MD Anderson), they work great. If not done properly (I won't mention names, but is was a large airport in town) they not only don't work but cause problems for other users.

On 7/8/2013 2:44 PM, Scott Royall wrote:

When the I-Team report aired, someone in this group remarked that the problem referred to actually predated the whole switch to trunking. Now this article seems to suggest that trunking is the problem. Let’s think about the overall situation for a moment. Isn’t it true that HTs in general make for pretty lousy transmitters? Of course they do, and that's because there are so many physical factors going against them. I know from personal experience that there are places in the Galleria and the tunnels where even the best high performance scanners stop receiving. I can't imagine hoping to get a signal out of those RF dark spots using a rubber duck antenna. Sorry, it just isn't going to happen until we can

use subspace communications. J All we can do currently is take steps to shrink those ”dark” spots as much as feasible.

Of course it is also true that going from 150 MHz to ultimately >700 MHz seriously changes how signals propagate. They go from acting mostly like sound waves to ricocheting around like light. Either one of these models can be used to minimize RF dark spots, but they require different approaches. It’s further true that analog signals degrade more gracefully than digital. A weak analog signal is noisy but intelligible; whereas, a weak digital signal—even with error correction—is useless after you lose more than a few bits. Encryption raises the bar even higher because it turns the data into a pseudo-random stream of bits almost impossible to intelligently predict and correct.

All of this would seem to argue against digital trunking. Yet, the cellular industry has managed to achieve the feat for several years, and digital trunking is little more than a simplified and specialized variation of cellular technology. Naturally, I’ll understand if AT&T customers wildly dispute how well cellular works, but that's because they have always been cheated. As a Verizon Wireless customer, I can genuinely say I’ve encountered damned few places where my phone doesn’t work. Even the deepest bowels of the Galleria aren't an issue, likely because Verizon realizes that a dropped call equates to lost income. Anyway, my point is that, if a dumb milliwatt phone can be supported to that extent, a five-watt HT with a rubber duck is far less of a challenge.

Indeed, as I lay in bed last night, the outlines of a possible solution occurred to me. Judging from the extra three million dollars the city deputy IT director mentioned, I strongly suspect Motorola has already had my idea. Basically, you turn the HFD vehicle radios into what the cellular industry calls “femtocells.” Essentially little mobile sites of their own that the HTs can automatically affiliate to. HFD uses BIG trucks with plenty of room on the roof for an UHF antenna hams would lust after. Since incidents invariably involve multiple units, the truck radios and laptops would need to know how to appoint one of their own to be the site master. The other vehicle radios would then act as slave receivers, listening for that feeble mayday call. The master would also be the gateway to the radio world beyond the incident site.

This sort of solution wouldn't have been possible even in January, but digital trunking—specifically TDMA—really changes the game. I suspect the trucks already have the hardware necessary. It may be little more than developing additional software for the MDT laptops to manage the radios.

Subject: [HoustonScan] old HFD repeaters

Appears that the old HFD repeater output have been repurposed for station alerting.

I have heard 453.425, 453.500, 453.950, 462.950 and 462.975 being used for dispatches and at various signal levels.

Can anyone hear anything on 453.675, 460.575 or 460.625?

I'm also not hearing the original 453.425 right now though.

It’s something in my neighborhood I think. At first, I thought someone in an aircraft was singing Vietnamese on there.

It’s the old Maintenance channel used by the 147th Fighter Group from Ellington. Haven’t heard it anymore since they eliminated it.

I took the scanner and walked down my street trying to DF it but I picked it up in too many places.

There are quite a few Vietnamese in my neighborhood so the possibilities are endless.

They must have some sort of bootleg wireless mic system. I can hear them talking in the background like listening to a baby monitor now.

Really thought it was a plane at first since the signal was fading in and out while on the discone. Must have the mic resting somewhere since the signal is steady.

Sounds better around 216.7875 FM mode.

Maybe I can wander around with a big speaker cranked up and wait until I hear feedback.

29037. TxWarn <- 800mhz???? 2m/70cm vertical antenna good enough?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-13 22:18:54 UTC
From: texasporty
Topic: 29037 Message: 29037

I'm trying to make sense of the TxWarn System, I just bought a Uniden HomePatrol scanner and it automatically inputs the frequencies from radioreference.com and it seems a majority of the channels I've been monitoring are associated with the TxWarn system.....

http://www.radioreference.com/apps/db/?sid=38

http://www.radioreference.com/apps/db/?sid=4563

For example.....
Galveston County SO 1 Dispatch (Law Dispatch 50032)
Galveston County SO 2 (law Dispatch 50064)
Santa Fe Police - Ch 1 (law Dispatch 54704)
Brazoria County SO Dispatch 1 (law Dispatch 23952)
Brazoria County SO Dispatch 2 (law Dispatch 23984)
University of Houston Clear Lake - Police Pri. (law Dispatch 17040)

....just too name a few, is my understanding correct that these are all 800mhz systems? The reason I ask is that I'm using a 2meter/70cm base station ham antenna that isn't really supposed to be able to pick up 800mhz frequencies. If the antenna does pick up 800mhz frequencies I should be set and this antenna is all I need otherwise I guess I'm going to need some kind of discone antenna or I reckon to pick up the 800mhz frequencies. The reason I'm confused is that I originally thought the number at the end was the frequency but after further studying I realize its just some sort of hex code. As you might figure I'm new to all this digital trunked systems mess and and all the scanners I had in the past were the old analog type where you just punched in the frequencies and it was much easier to understand how everything worked.

Actually you should be fine with what you have. The tower is visible
from the front door of the RadioShack next to Kroger. I'm in Dickinson
and I can hear everything fine with the duckie that came with my
Pro-164. I use it to run the Galveston County scanner feed on RR.

Yes they are trunked on 800.

Scanners really don't care much about the antenna. I've used paper clips, coat hangers, and RG-59 or RG-6XU cable. They are only receivers.

Hello Everyone!

I know I've been remiss in updating things. My apologies. But... I
know the Houston Police Scanner feed on RR is gone. I'd like to listen
to any scanner that will be monitoring the activity going on in the
River Oaks area when they have the marches today and tomorrow. I seem
to remember someone is running a non-RR feed? Or was I dreaming? Any
info would be welcome.

Yeah if it is River Oaks will be central, Special Ops, and possibly Pct. 1. I don't know if River Oaks patrol has their own channel. They might run off of cell phones the same way Tanglewood Patrol does.

River Oaks Patrol is TRBO on 464.875 Color Code 1 unless something has changed recently.

Yep, FPS had two trucks, 3 officers, at the courthouse in Galveston for the protest. Only about 30 people showed up so they had an easy assignment.

I didn't hear anything on 410.8 while down in Galveston though.

HPD is now predicting a "traffic fiasco" imminently in River Oaks. An 80-car caravan led by Quanell's black Hummer is en route down West Gray to the Post Office at West Gray and Dunlavy where the march will start. HPD is using 460.225 [123.0], yes that's right.

77-Fox is now in the area. Detectives Dispatcher advises they are using Central Tac 1 (encrypted). Quanell and protesters are apparently in the street and refusing to get on the sidewalk. Fox does not have the Tac channels and will be on Detectives Dispatch. Fox has the video downlink enabled.

Yes, it's simplex and appears to the HPD CID units. Central Dispatch now
advises the protest is being worked on SO Tac 1 (encrypted).

Any aviation electronics has to meet certain FAA specs. The below radios are just an APX7000 that Technisonic does special stuff to and gets it approved.

So basically yes to your answer. :-)

You can get all the coordinates from RR then make a google map.

29100. Trunking System Repeater

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-23 14:43:27 UTC
From: Brian Martin
Topic: 29100 Message: 29100

Is there such thing as a trunking system repeater? I was asked this question and don't have an answer. Their customer is operating on a Motorola Type 2 analog system and has VERY BAD coverage in one specific building. They are trying to find a solution.

Any advise would be great.

Thanks,

Brian

In English, what is station alerting? Is it the actual dispatching we've been missing for years?

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Myles Barkman
Sent: Thursday, July 11, 2013 23:11
To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] old HFD repeaters

Appears that the old HFD repeater output have been repurposed for station alerting.

I have heard 453.425, 453.500, 453.950, 462.950 and 462.975 being used for dispatches and at various signal levels.

Can anyone hear anything on 453.675, 460.575 or 460.625?

I'm also not hearing the original 453.425 right now though.

And just like that CDMA (and LTE later this year) will soon be popping up on the old Nextel frequencies. As CDMA carriers are about 1.25 mHz wide they "should" all be above 862 mHz. Glad I got a 769-862 bandpass filter. :-P

Help!

I have downloaded the site data for the Houston Simulcast Site along with the HPD Talk Group IDs for the Analog Dispatch Simulcasts.

Nothing has worked so far. I can get some of the HCSO Dispatch Channels to work, but the volume of traffic seems light to me.

I would appreciate any help or advice at this point.

29120. IAH airport

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-24 18:29:14 UTC
From: yerry
Topic: 29120 Message: 29120

I want to monitor as much of IAH on the TXWARN City of Houston system as possible and am wondering which single site will have the most traffic (not aircraft traffic itself and not United ops or any other frequencies or systems...just Aviation Department on the 700mhz system). I have a PSR800 and have site 3-05 in one virtual scanner and sites 3-01 through 3-04 in another virtual scanner. I can get HPD and HFD in phase II transmissions and I can hear some aviation and sanitation, water, parks and parking but am confused as to whether aviation is more likely on a specific site, probably near the airport that is not simulcast. Can someone suggest a single site I should put into a new virtual scanner to hear their operations? Thanks for the help. Jerry Jung

Keep in mind that site 1-06 is low site (less than 100 feet) intended for IAH coverage, so outside that area it will be difficult the receive this site.

For HPD and HFD on TXWARN P25 use the following link as a guideline / reference.

This worked great on the PSR-800. I have not tried it yet on my BCD-996XT.

http://wiki.radioreference.com/index.php/Houston_Police_and_Fire_P25

You have to treat this as a separate entity all by itself.

Interesting there Eric.

Dallas has reported $001 & $031
Nashville at $163
Various areas with the $167 and obvious FBI traffic on the outputs
Yup $169 is NAT Tac 1 for ICE
AZ as part of IWN was $201
San Diego reported $250
Hillsboro Cnty FLA was $293
ICE in Rhode Island is $301
Chicago this was a possible input to the FIO's using $653
ND/MN reported a $691
and IA with $791

Subject: [FedCom] 163.7 NAC 164

I had a couple of encrypted hits on 163.7 NAC 164 in Houston one morning
this week on my HP1. I previously identified 163.7 NAC 167 as the input to
the FBI repeater on 173.1 NAC 167. The 173.1 repeater was in use later the
same morning. It's not clear if NAC 164 is a new NAC for the input or
something else. (Also note 163.7 NAC 169 is ICE National Tactical 1.)

29140. Talkgroup 19360 (4ba)

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-28 18:52:50 UTC
From: Brian Martin
Topic: 29140 Message: 29140

Does anyone know who is assigned to the Mutual Aid Amateur Radio talkgroup on TXWARN? Has anyone heard any traffic on it?

Thanks,

Brian

29146. Dealing with TxWARN

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-07-31 02:40:47 UTC
From: Scott Royall
Topic: 29146 Message: 29146

As anyone who deals with the Project 25 version of TxWARN knows, scanning multiple agencies fairly on one scanner isn't easy. This is especially true if one of those agencies is HPD. Yes, HPD is TDMA, and many people think that the layer 3 sites are strictly TDMA. That's certainly what the administrators would prefer, but the hardware and software still tolerate FDMA. I know this because I've seen and heard FDMA activity on layer 3 sites.

No, the problem with including HPD with other agencies on one scanner is simply the volume of radio traffic. Two or three dispatch channels can lock up a scanner for ten minutes while saying very little (IMO since I'm slightly outside the city). However, there are a few tricks to equalize the odds of which agency the PSR-800 lands on without resorting to any double listing silliness. The main thing is to give each major agency its own scanlist. Not only does this make it simple to skip that agency when necessary, but it also effectively lets you decide which sites are used by each scanlist. While I truly do hear HCSO Dispatch 4 on layer 3 occasionally, it only happens probably when a District 4 unit has affiliated with the wrong site. (That deputy might be in for a ugly conversation.) Having the channels in the HCSO scanlist use layer 1 sites greatly improves chances of hearing them regularly.

Also, the number of active channels in a scanlist matter because that determines the percentage of time the radio spends in a scanlist. I do have a priority channel in each scanlist so the odds are high that I'll hear anything relevant while still doing a decent job of covering the western half of Houston.

If it's a legal copy of the CPS the below directions are said to work...

In order to obtain the 25kz keys that will allow for wide band programing, their is a narrow band training that you have to take.

There are five keys.

First off you have to have a MOL account. Go to traning, click on the LMS drop down, then in the upper right , enter narrowbanding, as one word, in the search box.

It will bring up the following: PRD0001.00E - FCC NARROWBANDING MANDATE TRAINING

Click on it and complete. Wait about 4 hours for the record to get logged into the system, then go to
case management and open a case stating that you have taken the training, include your cert #, and that
you are requesting the keys.

Within 24-36 hrs, you will recieve a e-mail about the ablity to order the keys.

At this point, go buying center>search catalog, enter in the part number and place your order.

Warning, the system is not setup to order all the keys at the same time, they must be ordered individually.

After placing your order, within 24-36 hours you will recieve e-mail with the key code.

DO NOT LOSE THEM, THEY ARE ONLY ISSUABLE ONCE.

Here is the part numbers:

Mototrbo – HKVN4046A

Professional Series – HKVN4180A

PR860 – HKVN4181A

Commercial Series – HKVN4182A

CP185 – HKVN4183A

Hello,

I've been a member of this group since 2001 or so. I've always been a scanner guy but was always interested in getting my Ham license. I've purchased a Baofeng radio. Any main frequencies i should listen to? Obviously i won't transmit as i have no license. I'm just looking to get a feel for it. I've looked at a few online study guides with pools of questions most seem pretty easy i took one and missed 2. Any suggestions ideas or thoughts? Not looking for anything major. I travel alot across the country and would love to talk to people from all over.

Thanks

Alberto

Two of the most active are the Saltgrass Link System on 146.920 and 443.825. These are linked to other repeaters across the state.

Also the repeater at 444.300 links to various nets during the day and the week, some with global participation.

I would plug in 146.52 and 446.0 and put them in the back of your scan list somewhere. Not sure how much they are used in the Houston area but they are a couple of the basic food group channels for hams across the country.

Good luck with testing.

29163. Running my own feed directly?

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-08-03 17:50:28 UTC
From: John Perry
Topic: 29163 Message: 29163

Hello Everyone!

For those of you that don't know I run the Galveston County Public Service scanner feed on RadioReference. Today I have received my second complaint from a listener that seems to think I'm responsible for the language/content that can be heard on my scanner feed. I've meticulously set up my feed to completely comply with the TOS as stated by RR. I don't feel I can be held responsible for language/content that occurs occasionally on the scanner freqs. Now RR says I'm supposed to "fix" this to comply with their TOS? I'm thinking that I may just publish my feed directly and not deal with RR at all. I have the means to do this easily. I know conchbbs does this as well.

I'd like to hear any comments on this. Is it worth it to have RR as an intermediary? Please advise.

I would ask the "reporter" for specific dates/times. Then go into your archive to see what they are talking about. It may just be someone trying to get your feed taken down for whatever reason.

Kevin gives some good advice there.

As for the reason for staying; well consider that right now you have a single connection outbound on your ISP account for the feed. If you start to host your own, right now (as I checked) you would have 7 outbound connections. What would happen if something happened down there? I don't know who you use for an ISP, but when 100s of connections start to appear on your account, they begin to wonder if you are hosting a server (which you will be), then you have to deal with that hassle.

Yeah, the TOS for RR seem pretty picky and the problem is that they are too generic, and sometimes rely on how a TG or conventional channel is listed in the RR Database. The thing you have to do is make sure you are not trying to put operational tactical channels on there. If you are truly avoiding that, how can you be held responsible for how the agencies using the channels use them?

This is all good advice. I DID check back and saw that the complainant was not logged in. SO... No way to contact this individual. I contacted RR and explained that if I can't get more info it can't be fixed. I

await an answer from them.

Wow! Quick reply from RR! It turns out that the complaint was that I was monitoring GCISD frequencies which IS against the RR TOS. But the rep from RR said he listened to the log and discovered that the transmission was coming from a GCSO officer talking about a school bus that had gotten rear-ended. So they agree that is wasn't coming from the GCISD and I'm in the clear. Whew!

Subject: [HoustonScan] Running my own feed directly?

Hello Everyone!

For those of you that don't know I run the Galveston County Public Service scanner feed on RadioReference. Today I have received my second complaint from a listener that seems to think I'm responsible for the language/content that can be heard on my scanner feed. I've meticulously set up my feed to completely comply with the TOS as stated by RR. I don't feel I can be held responsible for language/content that occurs occasionally on the scanner freqs. Now RR says I'm supposed to "fix" this to comply with their TOS? I'm thinking that I may just publish my feed directly and not deal with RR at all. I have the means to do this easily. I know conchbbs does this as well.

I'd like to hear any comments on this. Is it worth it to have RR as an intermediary? Please advise.

To: HoustonScan@yahoogroups.com
Subject: [HoustonScan] Re: Running my own feed directly?

Kevin gives some good advice there.

As for the reason for staying; well consider that right now you have a single connection outbound on your ISP account for the feed. If you start to host your own, right now (as I checked) you would have 7 outbound connections. What would happen if something happened down there? I don't know who you use for an ISP, but when 100s of connections start to appear on your account, they begin to wonder if you are hosting a server (which you will be), then you have to deal with that hassle.

Yeah, the TOS for RR seem pretty picky and the problem is that they are too generic, and sometimes rely on how a TG or conventional channel is listed in the RR Database. The thing you have to do is make sure you are not trying to put operational tactical channels on there. If you are truly avoiding that, how can you be held responsible for how the agencies using the channels use them?

Most live scanner feeds are migrating AWAY from RR and are going
over TO Broadcastify.

All live audio services on RadioReference.com are being transitioned to
Broadcastify. Please make sure you update your links and bookmarks to point to
the new feed locations on Broadcastify.

Existing RadioReference.com premium subscribers can log into Broadcastify
with their RadioReference username and passwords. Enjoy!

PLEASE NOTE: I have NO affiliation whatsoever with either RR or
Broadcastify.
DO NOT CONTACT ME regarding issues with these sites !!!!!

Foul language and inappropriate content / remarks is also a most probable violation of FCC rules. If you have the audio to back up the complaints I am
sure the Galveston County Public Service "suits" would be most eager to hear the violations and do their own "policing" from within the agency before
they get their license yanked by the FCC. Just food for thought.

Of course you could notify the FCC directly.......

Subject: Harris County Citizen Corps: Volunteers Needed for a Full Scale Emergency Exercise on Saturday, August 24, 2013.

The Port of Houston Authority will be conducting a Full Scale Emergency Exercise on Saturday, August 24, 2013.

This exercise is an essential program designed to test and evaluate the emergency plans and responses of the Port of Houston Authority, first responders, and other response agencies in the event of a Mass Casualty Incident at the Bayport Cruise Terminal.

Volunteer actors play a significant role in the exercise, and are needed to portray victims. Select volunteers will be moulaged (made up in Hollywood style makeup to reflect injuries). All volunteers must be at least 18 years of age unless prior approval is made. Attached is a registration form for volunteers. Please fill it out and return a.s.a.p. More information is on the registration form.

All volunteers will report to the Bayport Cruise Terminal at 4700 Cruise Road Pasadena, TX 77586 at 7:30 AM on Saturday August 24th. Volunteers will be going through a sign-in process to receive assignments, moulage, safety instructions and additional information. All volunteers can expect to be released from the exercise around Noon.

Note: This exercise will be conducted in a restricted facility which means photography at or inside the facility is prohibited. It's very important to note the criteria listed on the registration form. The exercise scenario may involve simulated weapons and firearms. For the safety of volunteers and participants we are requesting that no firearms be allowed on your person or in your vehicle during the exercise.

If you have any questions regarding this exercise, please contact Colin Rizzo, EMC, POHA at crizzo@...

On any APX owned by the CoH you need an ASK. On any other APX you may or may not need an ASK, depending on flash options and how it was programmed. On the models in the Ebay auction referenced you would only need an ASK if that flag was set in programming (and a Google search results ways to get around that).

And with ASK's it can get even more complicated. You can have a "System Owner" ASK required and it can be a completely different system id than the system you own. Another gotcha is multiple systems in a radio. Say a radio is owned by system id "123" and system "456" wants to add a TG for them, they might need an ASK for 123 AND 456 AND whatever the system owner id is. Confused yet?

And then add a Harris system, which may or may not require an AWK (Advanced WACN Key) and you may end up needing multiple ASK's.

With a high quality mobile antenna installed on the vehicle.

Temporarily, I am using a mag-mount stuck to the center of
my SUV rooftop. It works really great, er, well, even in the suburbs
for the HFD and HPD P25 system. Reception was clear and quite
understandable on my BCD-996XT except for one alarm I never
did figure out.

"Left on Taft. Food on fire ...."

I never did figure out what the lady robot actually said !!!!

Sent: Wednesday, August 07, 2013 11:14 AM
Subject: Harris County Citizen Corps: Volunteers Needed for a Full Scale
Emergency Exercise on Saturday, August 24, 2013.

The Port of Houston Authority will be conducting a Full Scale Emergency
Exercise on Saturday, August 24, 2013.
This exercise is an essential program designed to test and evaluate the
emergency plans and responses of the Port of Houston Authority, first
responders, and other response agencies in the event of a Mass Casualty Incident
at the Bayport Cruise Terminal.
Volunteer actors play a significant role in the exercise, and are needed
to portray victims. Select volunteers will be moulaged (made up in Hollywood
style makeup to reflect injuries). All volunteers must be at least 18
years of age unless prior approval is made. Attach ed is a registration form
for volunteers. Please fill it out and return a.s.a.p. More information
is on the registration form.
All volunteers will report to the Bayport Cruise Terminal at 4700 Cruise
Road Pasadena, TX 77586 at 7:30 AM on Saturday August 24th. Volunteers will
be going through a sign-in process to receive assignments, moulage, safety
instructions and additional information. All volunteers can expect to be
released from the exercise around Noon.
Note: This exercise will be conducted in a restricted facility which means
photography at or inside the fa cility is prohibited. It’s very important
to note the criteria listed on the registration form. The exercise
scenario may involve simulated weapons and firearms. For the safety of
volunteers and participants we are requesting that no firearms be allowed on your
person or in your vehicle during the exercise.
If you have any questions regarding this exercise, please contact Colin
Rizzo, EMC, POHA at _crizzo@..._ (mailto:crizzo@...)

Very interesting listening here the last 10 minutes. A unit identified as HPD SWAT has taken over the mutual aid 2 talk group and have told a fire department trying to guide in life flight to use another channel. I wonder if the swat operation realizes they are not encrypted.

edit: SWAT unit just advised his units to change over the another mutual aid channel.

The Val Jahnke fire training facility is at 8030 Braniff. Maybe just training?

There is some building at that intersection closer to Randolph-Central Aviation Supply and Equipment at 8050 Braniff.

Could of been the HFD Training academy, they have the "burn building" going 7 days a week now for whatever shift is on, weekends included.
Thanks for the update!

I need to teach a short familiarity course on TxWARN to the members of an emergency communications team. I've pulled what's on RR. Is there a short, AUTHORITATIVE summary of the system somewhere online (description, some stats, etc.)? I googled, etc., but didn't find exactly what I was looking for.

Feel free to email me direct at [my first name]@[my callsign].com if you'd rather. Thanks!

29222. Missing TG Alphatags in PSR-800

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-08-16 15:04:23 UTC
From: yerry
Topic: 29222 Message: 29222

I'm looking for help to get my PSR-800 to show all the correct TG alphatags for TxWarn, although the problem happens on other LTR and other Moto systems as well.

I have noticed recently that when scanning, in particular, TxWarn (with wildcard Talkgroups enabled) I see several Talkgroups that show up on the wildcard display with no alphatag information. For instance, TG 2376 (MetroBusNorthwest according to RadioReference.com) shows up only on wildcard on the radio with no "alpha tag" information at all. However, most other TGs in the Metro Transit Authority do show the AlphaTag on the radio. I see similiar issues with some other agencies....most show the alpha tag but a few don't.

At first I thought this was being caused by not downloading the current RadioReference updates to the GRE EZ-Scan software on my PC or not getting them into the radio. However, even though my PC software is up to date, TG 2376 isn't in the list of TGs for TxWarn on my PC.

When checking on radioreference for TG 2376 it does appear on their website listing and has been for awhile (in other words it wasn't added very recently). But, for some reason, it doesn't download them or install them into the configuration.

Am I doing something wrong? On the EZ-scan software I check for library updates every monday and download them. Then, following the prompts from the software, I copy them to the radio and update the TGs. However, obviously, if they aren't getting into the PC to begin with they will never get to the radio. Has RR stopped updating the GRE or something? Any other ideas would be appreciated.

Otherwise I guess I manually type them into EZScan.

Thanks, Jerry.

That frequency is a GMRS repeater input. There are some groups in the houston area that use GMRS and seem to act like law enforcement on them. See if you hear anything on 462.725. That would be the repeater output.

29232. Alicia

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-08-18 14:02:46 UTC
From: Kevin Chessher
Topic: 29232 Message: 29232

30 yeas ago today Hurricane Alicia
<http://en.wikipedia.org/wiki/Hurricane_Alicia> hit. Probably the only hurricane landfall date I'll always remember as it was 2 days before my wedding...and 30 years later I'm still married to the same awesome lady.

I'm pretty sure all I had at the time was a BC-250* and BC-100 (total of 66 channels), but you didn't need much back then. I remember standing outside my apartment on Fondren (8800 block, it was a lot nicer in those days :-P) around 2:00 am and watching the power lines arc as they hit. Then making my way through all the debris on the road once the sun was up to head to my wife-to-be/future in-laws house around I-10 and Gessner...what a mess.

Anyone else remember Alicia? Some of you probably even born yet...yes, I'm old.

*speaking of that, my apartment on Fondren was a Harold Farb property, their security people were on 490.xxxx but switched to this new thing called trunking. I just had to listen so I got a MFJ downconvertor that brought 800 down to 400, I could hear the control station on the input so I only entered in those frequencies, which let me hear dispatch and any units close by. They used the MX trunking portables so they were limited to only 5 frequencies which made it easier. I also connected a 49 MHz wireless headset via VOX to my scanner so I could hear them as I went to the pool or check the mail. It's amazing my wife married me.

>>Anyone else remember Alicia? Some of you probably even born yet...yes, I'm old.

Barely. I was 1 year old and living in Pasadena. We actually suffered worse damage from Ike than from Alicia, and only because a tree limb took out our electrical drop.

I heard stories years later that Pasadena PD was roving the streets vowing to shoot looters on sight.

LOL When did you hear the stories when you were 5?

NASA Aircraft Take To Skies Over Houston For Air Pollution Study
http://feedly.com/k/1cRltEn

Flights Will Be As Low As 1,000 Feet To Conduct Air Sampling A multi-year NASA science mission soon will be airborne over Houston to help scientists measure and forecast air quality from space. NASA is inviting media to see two NASA aircraft equipped with scientific instruments at Ellington Field in Houston on Tuesday, Sept. 3 as the planes are being readied for a month-long series of flights over the metropolitan area beginning Wednesday, Sept. 4.

Don’t know if this is the actual aircraft pictured in that article that will be conducting the flight.

http://registry.faa.gov/aircraftinquiry/NNum_Results.aspx?NNumbertxt=801NA

Guess we can listen to the usual NASA freqs:

230.5 NASA research aircraft

235.4 NASA Maint Control EFD

123.125 NASA Air-Air

There was a repeater in north Pasadena using DPL 074. Perhaps they changed it recently to 654.

The one with 71.9 was possibly in the League City area.

Not sure if it is still on the air.

Don’t hear much GMRS anymore.

Brian, don’t you have one on the books for 462.550 in Pasadena?

Yep Miles. It's in the attic. It doesn't get much coverage but it's good for the wife and kiddo. Wife almost refuses to use it. Kiddo usually uses the Pasadena 145.29 repeater or the 145.17 repeater. But if you can hit it Myles, feel free to.

Brian
N5KIE

Also, if anyone in the group is looking for a Spectra based Suitcase Repeater let me know. It is 146 - 174. (I have it programmed with the 145.25 pair right now.) Works great. I just don't have a use for it.

This is the aircraft that was based at Ellington that NASA has used multiple times over the Houston area for high altitude air sampling. Seriously doubt they would be using the ER-2 at low altitudes, the B200 you posted the link for would work very well for that.

You don't have to be a ham to use GMRS. All you have to do is have a GMRS license. The license is good for all of your family members. You are more than happy to use it if you can hit it. I will be putting a local repeater up at over 300 feet soon. When I do I will publish the info on www.mygmrs.com and it will be open to the public. I started recording the 462.725 repeater today at about 10:00AM. I will try to see what it is and post it as soon as I know.

My problem was that I needed a duplexer. I just didn't want to pay the money for one.

>> You don't have to be a ham to use GMRS. All you have to do is have a GMRS license. The license is good for all of your family members. You are more than happy to use it if you can hit it. I will be putting a local repeater up at over 300 feet soon. When I do I will publish the info on www.mygmrs.com and it will be open to the public. I started recording the 462.725 repeater today at about 10:00AM. I will try to see what it is and post it as soon as I know.

I remember plotting the hurricane on a chart as it approached. Tuned into Ed Brandon as he provided what seemed like non stop reports for days. I'm sure the cocaine habit he had helped him stay awake. I largely monitored HPD westside back in those days.

I had a Bearcat 250, and a regency M100 at the time. We were in the Woodlands so mainly just wind damage. I remember picking up a DPS command post in La Marque on 159.090 after the storm... Don't remember if it was a band opening or the "Scanner Beam" in the attic. Just curious... how many of us were RCMA members back then? TX-97

I was on the Fresno Vol Fire Department and ran a shelter at the Baptist Church. It was a long night and day. I had a BC 250 and a FB County handheld for communication with the fire station..We never lost power. My son in law was at Dow in Freeport and my wife and daughter were at the house. No damage just a flooded yard. They also had a another scanner but I have forgotten what type it was..I took down my scanner beam antenna before the storm. and I still have it today. .It was not my first storm but I hope Ike was the last. I am now in Caldwell. I hope we don't see another Alicia or Ike for a long while.

This is the traffic stop of George Zimmerman in Forney, TX. If you watch between 0:12 and 0:30 the officer has to pull his radio out of the holster, hold it up in the air, and repeatedly key it. I believe it is a TRBO system.

I would lean toward this being more of a system design (or something is broken) issue than a specific MOTOTRBO (or any DMR radio) platform issue. The signal required for the equivalent "full quieting"in DRM 2-slot TMDA is much less than analog.

Actually once I looked the system up on RR I see it's VHF, VHF and ANY
form of trunking really don't play well together at times due to ducting.

Not saying that had anything to do with having to raise his handheld,
just an observation.

You see nac 001 because its encrypted. My kid looked yesterday and everything is nac 001. Very rarely someone will come through clear.

Could be interesting to listen in if they use radios.

-Myles

From: Sloan, Mark T. (HCOHSEM) [mailto:mark.sloan@...]
Sent: Wednesday, August 07, 2013 11:14 AM
Subject: Harris County Citizen Corps: Volunteers Needed for a Full Scale Emergency Exercise on Saturday, August 24, 2013.

The Port of Houston Authority will be conducting a Full Scale Emergency Exercise on Saturday, August 24, 2013.

This exercise is an essential program designed to test and evaluate the emergency plans and responses of the Port of Houston Authority, first responders, and other response agencies in the event of a Mass Casualty Incident at the Bayport Cruise Terminal.

Volunteer actors play a significant role in the exercise, and are needed to portray victims. Select volunteers will be moulaged (made up in Hollywood style makeup to reflect injuries). All volunteers must be at least 18 years of age unless prior approval is made. Attached is a registration form for volunteers. Please fill it out and return a.s.a.p. More information is on the registration form.

All volunteers will report to the Bayport Cruise Terminal at 4700 Cruise Road Pasadena, TX 77586 at 7:30 AM on Saturday August 24th. Volunteers will be going through a sign-in process to receive assignments, moulage, safety instructions and additional information. All volunteers can expect to be released from the exercise around Noon.

Note: This exercise will be conducted in a restricted facility which means photography at or inside the facility is prohibited. It's very important to note the criteria listed on the registration form. The exercise scenario may involve simulated weapons and firearms. For the safety of volunteers and

participants we are requesting that no firearms be allowed on your person or in your vehicle during the exercise.

If you have any questions regarding this exercise, please contact Colin Rizzo, EMC, POHA at crizzo@...

29269. Houston CBP Nets changed

Yahoo group: HoustonScan (2012 — 2013)

From: Eric C. Carlson
Topic: 29269 Message: 29269

165.2375 [100.0] CBP Ch. A2 Net-1 Houston repeater was taken down on 8/20
and replaced with a new digital repeater.
165.6875 [100.0] CBP Ch. A8 Net-4 Seaport repeater was taken down on 8/22
and replaced with a new digital repeater.
164.6 [100.0] CBP Net-5 does not appear to have been replaced yet.
165.2375 [100.0] CBP Net-3 Galveston may have already been replaced earlier
but I can't confirm that.

New channels:
170.125 (dual mode 100.0 or NAC 304) just to keep things confusing, it
appears that this is the new Net-1 replacement
171.6625 (NAC 301) appears to be the Net-4 replacement

29285. Radio Shack 106 scanner repair

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-08-27 12:49:49 UTC
From: jonclee1966
Topic: 29285 Message: 29285

I need to get my RS-106 scanner repaired. The antenna pin has broken off in the BNC connection inside the scanner and I need to replace the antenna. Also,the scanner needs a general tune up as it looses trunking lock periodically. Does anyone have a recommended R/S location preferably on the west side of Harris county to drop this off to send off for repair?
Thanks

There is still some car-to-car simplex activity on 165.2375 [100.0].

...something like the below would be legal...

http://www.okayo.com/products_EJ-880T.html

Max power shows to only be 50mW, but you'd be surprised how far that will go. Some of the selectable frequencies are pretty much dead on 700 MHz PS frequencies licensed in the area.

I wonder how many other ones (other than the one I found) are around the area?

29303. PL tone

Does anyone have the correct PL tone for Community VFD on 33.52?

RR shows it to be 127.?, however have tried the 127 and it is dead while another scanner will receive transmissions with no PL used, one of my old 780's keeps picking up birdies in various areas without the PL used

Just like 453.8375 it's CSQ. They only use it for paging, so they don't really need PL on it.

Thought their UHF tone-out freq was 453.1875.

I had 453.8375 as their 2-way ops channel.

Those guys are far from me so I don't keep up with them.

.8375 is the only UHF channel they ever lit up. It has never had a PL tone, and has always been one-way paging only. I'm kind of surprised they never had interference problems with Lake Jackson FD.

The tone on lowband going away is a fairly recent development. As of 2007 it was still transmitting a tone.

There was some scuttle going around earlier this year about them transitioning to 1A7, but apparently nothing came of it.

Not really correct. ACVFD has "lit up" all three 453.x repeater pairs at various times. Extremely two-way. They're also on 2318, despite the scuttlebutt on here in the past about how much they hated it. Hurrumphf! So much hot air.

And yes, I've heard them on 1A7 once so far.

This is the aircraft that was based at Ellington that NASA has used multiple times over the Houston area for high altitude air sampling. Seriously doubt they would be using the ER-2 at low altitudes, the B200 you posted the link for would work very well for that.

http://www.nasa.gov/centers/dryden/research/AirSci/ER-2/

I never thought about that, I bet you're right.

I really need to learn how to start thinking outside the box.

Subject: [HoustonScan] interesting license

So what is Orange County SO needing ham radio frequencies for?

It’s weak enough and narrow enough not to cause much interference but curious why they thought they needed to use those frequencies.

http://wireless2.fcc.gov/UlsApp/UlsSearch/licenseFreqSum.jsp?licKey=3512221

They have a special condition:

Licensee must operate in accordance with DA 10-291, released on February 23, 2010. Licensees must maintain a log of all Recon Scout use. The log will include the date of operation, start/stop times, location of operation, frequency segment of operation, reason for use, and point of contact. Licensees must provide this information to the Commission or to the National Telecommunications and Information Administration upon request of either agency.

So what’s a “Recon Scout”?

Answers lie within these attachments. Looks like there was concern from the ARRL that was squashed.

http://wireless2.fcc.gov/UlsApp/ApplicationSearch/applAdminAttachments.jsp?applID=7752494#

I can hear the Waller Buc-ee's on FRS channel 2 (code4) that would be 462.5875 (77.0)? They are using nice commercial HT's I would have thought they would have a less use frequency.

I thought a business could not use FRS but the FCC page says personal or business use. Did this change at some point or has it always been this way?

Due to PC and health issues, the previous post I did was not replied to and I apologize..
I will not be able to make Belton at this time (I doubt that will change)...
I have LOTS of 7/8in Heliax and some Comscope Hardline for sale....it must go or else it gets scrapped...
Connectors are available and for those runs with no connectors, it is extra...Most is 7/8in but have some 1/2in and also some 3/4in AL Hardline (easy to make PL259s to make with them)...One run of 330 ft on spool is already spoken for (its at the back of the storage unit so the other runs have to go first...) ALso have DB365 antenna mounts...plus DB201s, Heathkit Warrior Amp and NC 300 (may be 303) with 6,2 and 220 converters.....PM me for details and to talk costs..I WILL NOT reply to any messages from the lists..Also have lot of Midland XTR/ STI and STII radios for links, etc....plus 100watts Midland UHF rptr...along with GE MSTR II 75w UHF rptr on 444 along with 45w UHF rptr and also 100w Motorola VHF rptr...(Int PA problem..have not have time to troubleshoot)...Knight T60 transmitter and several duplexers UHF and 220...MUCH more gear and not able to list it all (wish I could take it all to Belton but not able to)...if interested, contact me at setxchris@.......I WILL NOT reply to messages on lists.....Please leave them quiet...I also have ACC SM100s, LinkCom DVRs as well as RLC3s and ACC DVR fully loaded.....I need to inventory it all but heat and health issues have kept me from doing so...Make offer via PM ONLY.....If you reply via the list, it will be ignored...

29432. Re: [HoustonScan] NASA Aircraft Take To Skies Over Houston For Air Pollution Study

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-19 02:35:04 UTC
From: Eric C. Carlson
Topic: 29237 Message: 29432

I heard some air-to-air discussion today on 123.45 between NASA 525 and NASA 529. So there appears to be a third aircraft involved in the pollution study (NASA 525). One was letting the other know that the P3 was dumping fuel and returning to EFD with an unspecified problem. They also discussed that a boat is involved and that it was supposed to be in Galveston Harbor today. One of the aircraft was supposed to be contacting the boat. Anyone catch anything on the marine channels? Also, are there any other NASA frequencies we should be checking related to this operation? 230.5 doesn't seem to be used and 135.825 seems to be exclusively the NASA 809/817 flights doing unrelated activity.

Unless something has changed this will be an upgrade of the EDACS system to Harris P25, not a merge with TxWARN. Doesn't mean anything to the scanner listener but they will remain separate systems.

Its official, found this as a follow up to Ed's original post on GRE:

http://socalscanner.com/2013/09/19/whistler-group-acquires-gres-assets-to-manufacture-radio-shack-scanner-product-line/

Hope they will get moving on production of the PSR-800/900 line.
I also understand Uniden has already made a trip to Asia to get their next scanner product manufactured.

29468. Re: [HoustonScan] Macy's implosion

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-22 22:26:27 UTC
From: Eric C. Carlson
Topic: 29426 Message: 29468

I wasn't able to monitor the demolition but the clean-up is on 464.5 DCS 311 simplex. This frequency and tone combo seems be a rental radio as it pops-up from time to time downtown with itinerant users. Cherry Demolition has used Houston 2-way rentals in the past for an implosion event.

29469. RE: [HoustonScan] old HFD repeaters

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-23 03:37:25 UTC
From: Josh W.
Topic: 29007 Message: 29469

On a related note, 153.89 was active again this morning. The MDC squawks sound slightly different now and there is no voice acknowledgement from the stations. I also heard the dreaded MSF/Quantar double-beep a couple of times.

New UHF FSA Frequency plan

We are breaking Houston into 4 FSA Zones. The HEC, Teague, Reed rd. and Lake Houston Zones.

HEC Zone\Master Site

Fire Stations
2,3,4,5,6,7,8,9,10,11,12,13,15,16,17,18,19,20,21,23,25,26,27,28,29,30,31,32,33,34,35,37,38
39,40,41,42,43,44,45,46,50,53,54,56,58,60,62,63,64,67,74,92,99

Receive 453.500

Lake Houston Zone

(Repeater Site)

Fire Stations 65,101,102,103,104,105

Receive 462.975

Reed Rd Zone

(Repeater Site)

Fire Stations 36,24,47,48,52,55,59,61,68,70,71,72,73,80,81,82,93,94

Receive 462.950

Teague Rd Zone

(Repeater Site)

Fire Station 49,51,57,60,66,69,75,76,77,78,83,86,90,96

Receive 453.950

Mark

Probably due to digital. If they were analog (and VHF) this wouldn't have happened.

New UHF FSA Frequency plan
We are breaking Houston into 4 FSA Zones. The HEC, Teague, Reed rd. and Lake Houston Zones.

HEC Zone\Master Site

Fire Stations
2,3,4,5,6,7,8,9,10,11,12,13,15,16,17,18,19,20,21,23,25,26,27,28,29,30,31,32,33,34,35,37,38
39,40,41,42,43,44,45,46,50,53,54,56,58,60,62,63,64,67,74,92,99

Receive 453.500

Lake Houston Zone

(Repeater Site)

Fire Stations 65,101,102,103,104,105

Receive 462.975

Reed Rd Zone

(Repeater Site)

Fire Stations 36,24,47,48,52,55,59,61,68,70,71,72,73,80,81,82,93,94

Receive 462.950

Teague Rd Zone

(Repeater Site)

Fire Station 49,51,57,60,66,69,75,76,77,78,83,86,90,96

Receive 453.950

HOUSTON (AP) - Dozens of federal, state and local security agencies will join industry and educational resources in testing security at the Port of Houston.

The SECUREX 2013 exercise is scheduled for Wednesday afternoon under the command of the Coast Guard and Port of Houston Authority. Crews will respond to a simulated "dirty bomb" and test various incident command system functions.

The exercise at the Barbour's Cut Cruise Terminal at Morgan's Point, near La Porte, is part of an Area Maritime Security Training and Exercise Program, or AMSTEP.

And the 250’ tower that the Katy UHF Saltgrass repeater was on didn’t fall two years ago? A tower falling during weather is about as exciting to the newsies as a fender-bender as long as it happens in the designed “accordion” matter.

☐

OK the City of Houston Teague Rd tower came down (on the ground) Friday evening. Is the County TxWarn N. Gessner site on the ground or just out of service but still standing? My Astro spectra stopped working on the N. Gessner site.
Thanks,
Marvin

HOUSTON (AP) - Dozens of federal, state and local security agencies will join industry and educational resources in testing security at the Port of Houston.

The SECUREX 2013 exercise is scheduled for Wednesday afternoon under the command of the Coast Guard and Port of Houston Authority. Crews will respond to a simulated "dirty bomb" and test various incident command system functions.

The exercise at the Barbour's Cut Cruise Terminal at Morgan's Point, near La Porte, is part of an Area Maritime Security Training and Exercise Program, or AMSTEP.

I don’t work in the news industry, but I would bet that since it impacted very little of the general public, it was not newsworthy. If the audience was a bunch of radio nerds, then yes, send the live truck.

The tower fell on itself, didn’t impact any traffic, didn’t knock out any power and didn’t keep people from texting or posting on Facebook. I would be curious to know what if anything the guys in station 66 might have heard when it happened.

My question is, if it was a rusted out guy wire, how often are tower inspections done on these things? This kind of thing rarely happens. Was this truly an unavoidable “act of God” or was there some complacency with checking for defects? Just like the problem with the aging bridges in America, inspections have to be made regularly. There is this thing called metal fatigue.

I can’t see lightning taking down a tower. A tree maybe. Towers are hit by lightning all the time. Perhaps it was a contributing factor.

And the 250’ tower that the Katy UHF Saltgrass repeater was on didn’t fall two years ago? A tower falling during weather is about as exciting to the newsies as a fender-bender as long as it happens in the designed “accordion” matter.

.....and then we have the problem of the aging 900+ foot tower that has been there since the early 1950's -- FM 528 just inside the Friendswood city limits and right next to the gun range. I have been told that tower climbers
will not even climb that tower any longer because it is so unsafe. The last climber
who tried reached up to pull on the next rung in the sequence and the thing came loose in his hand! Needless to say he came right back down rather carefully.

That tower has had no lighting at all for several months. Totally dark. Recently just 2 or 3 of the many strobes were turned back on but nothing at the top.

So, WHO DOES do the tower and bolt and guy wire inspections and how does one go about reporting and getting rid of unsafe towers?

29508. RE: [HoustonScan] old HFD repeaters

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-25 02:21:58 UTC
From: Myles Barkman
Topic: 29007 Message: 29508

The owner of the tower is 1120 Tower Corporation at 1835 Algoa Friendswood Rd about a mile and half from the Alvin/Dickinson TxWARN site 5.

A look at that property tells me why the tower is in the shape it is. Looks like a sat dish graveyard.

Their website is still selling space on that tower. http://x-analog.com/xtower.htm

Appears to have a few active licenses using the tower:

464.800 repeater-Altura Cogen/Targa Midstream

Several microwave licenses

937.75 repeater-FCI 900

GTE Mobilnet

927.875 Teletrac (AVL)

488.8625 State of Texas-UH Clear Lake PD (repeater defunct for years-license expires March 2014) Why did they even have a repeater way over here?

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of teknishun@...
Sent: Tuesday, September 24, 2013 8:07 PM
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] old HFD repeaters

.....and then we have the problem of the aging 900+ foot tower that has

been there since the early 1950's -- FM 528 just inside the Friendswood

city limits and right next to the gun range. I have been told that tower climbers

will not even climb that tower any longer because it is so unsafe. The last climber

who tried reached up to pull on the next rung in the sequence and the thing

came loose in his hand! Needless to say he came right back down rather carefully.

That tower has had no lighting at all for several months. Totally dark.

Recently just 2 or 3 of the many strobes were turned back on but nothing at

the top.

So, WHO DOES do the tower and bolt and guy wire inspections and how

does one go about reporting and getting rid of unsafe towers?

Martin L Matthews KF5OPQ
teknishun@...

In a message dated 9/24/2013 5:25:03 P.M. Central Daylight Time, kg5ai@... writes:

I don’t work in the news industry, but I would bet that since it impacted very little of the general public, it was not newsworthy. If the audience was a bunch of radio nerds, then yes, send the live truck.

The tower fell on itself, didn’t impact any traffic, didn’t knock out any power and didn’t keep people from texting or posting on Facebook. I would be curious to know what if anything the guys in station 66 might have heard when it happened.

My question is, if it was a rusted out guy wire, how often are tower inspections done on these things? This kind of thing rarely happens. Was this truly an unavoidable “act of God” or was there some complacency with checking for defects? Just like the problem with the aging bridges in America, inspections have to be made regularly. There is this thing called metal fatigue.

I can’t see lightning taking down a tower. A tree maybe. Towers are hit by lightning all the time. Perhaps it was a contributing factor.

And the 250’ tower that the Katy UHF Saltgrass repeater was on didn’t fall two years ago? A tower falling during weather is about as exciting to the newsies as a fender-bender as long as it happens in the designed “accordion” matter.

29532. Re: [HoustonScan] old HFD repeaters

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-27 19:15:20 UTC
From: teknishun@...
Topic: 29007 Message: 29532

Very interesting info. I wonder when the last time their website was updated?
There are only 2 marker lights currently burning on the tower. Sometimes 3 if the lowest one
decides to illuminate instead of just arc-ing.

I remember as a kid there was a Ham radio repeater on that tower that had a phone patch with it. A few people had "mobile telephones" in their vehicles which
in no way resemble the "cell phones" of today's modern world. I used to listen
to those phone patches late at night. You could hear some great stuff!
Out in the rural areas of west Texas there were dozens of such towers you could listen to. Lord, I'm gettin' old!!!!

GTE Mobilnet no longer exists - it is Verizon Wireless now (since 2004).
GTE/Verizon moved their cell site off that tower about 8 years ago.
They left the coax and antennas. I guess it was too unsafe to remove them.
Constructed their own cell site on a regular cell tower in the same area.

I imagine UH Clear Lake, being a part of the University of Houston system, had a PD repeater on that tower due to its sheer height. 1100 feet high could
very well cover the UH Clear Lake campus from that location. That was one of the
few "big" towers in operation in that area back in the day. Sure, there were others, but
they were not on "every corner" like they seem to be today.

UH used to own that tower and KUHT-FM and channel 8 television both broadcast
from there back in the analog days.

I believe UHCL-PD is on TxWarn today.

Martin L Matthews KF5OPQ
teknishun@... (mailto:teknishun@...m)

In a message dated 9/24/2013 9:22:09 P.M. Central Daylight Time,
kg5ai@... writes:

The owner of the tower is 1120 Tower Corporation at 1835 Algoa Friendswood Rd about a mile and half from the Alvin/Dickinson TxWARN site 5.
A look at that property tells me why the tower is in the shape it is.
Looks like a sat dish graveyard.
Their website is still selling space on that tower.
http://x-analog.com/xtower.htm

Appears to have a few active licenses using the tower:
464.800 repeater-Altura Cogen/Targa Midstream
Several microwave licenses
937.75 repeater-FCI 900
GTE Mobilnet
927.875 Teletrac (AVL)
488.8625 State of Texas-UH Clear Lake PD (repeater defunct for
years-license expires March 2014) Why did they even have a repeater way over here?

Sent: Tuesday, September 24, 2013 8:07 PM
To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] old HFD repeaters

.....and then we have the problem of the aging 900+ foot tower that has

been there since the early 1950's -- FM 528 just inside the Friendswood

city limits and right next to the gun range. I have been told that tower
climbers

will not even climb that tower any longer because it is so unsafe. The
last climber

who tried reached up to pull on the next rung in the sequence and the
thing

came loose in his hand! Needless to say he came right back down rather
carefully.

That tower has had no lighting at all for several months. Totally dark.

Recently just 2 or 3 of the many strobes were turned back on but nothing
at

the top.

So, WHO DOES do the tower and bolt and guy wire inspections and how

does one go about reporting and getting rid of unsafe towers?

Martin L Matthews KF5OPQ
teknishun@... (mailto:teknishun@...)

In a message dated 9/24/2013 5:25:03 P.M. Central Daylight Time,
_kg5ai@..._ (mailto:kg5ai@...) writes:

I don’t work in the news industry, but I would bet that since it impacted
very little of the general public, it was not newsworthy. If the audience
was a bunch of radio nerds, then yes, send the live truck.
The tower fell on itself, didn’t impact any traffic, didn’t knock out any

power and didn’t keep people from texting or posting on Facebook. I would be curious to know what if anything the guys in station 66 might have heard when it happened.
My question is, if it was a rusted out guy wire, how often are tower inspections done on these things? This kind of thing rarely happens. Was this truly an unavoidable “act of God” or was there some complacency with checking for defects? Just like the problem with the aging bridges in America, inspections have to be made regularly. There is this thing called metal fatigue.
I can’t see lightning taking down a tower. A tree maybe. Towers are hit by lightning all the time. Perhaps it was a contributing factor.

And the 250’ tower that the Katy UHF Saltgrass repeater was on didn’t fall two years ago? A tower falling during weather is about as exciting to the newsies as a fender-bender as long as it happens in the designed “ accordion” matter.

Tower Road and Senior Road? When the bolts lifting the antenna broke and
it
fell, slicing the guy wires on the way down?

I have that entire event on video, and a lot more. It is a silent film, but
the video
speaks for itself. I have never had to climb towers, but have held a VERY
healthy
respect for them ever since that day. I can still "see" those men's
bodies, who were
all still alive at the time, being flung off into space as the whole thing
was crashing
down.

Hi everybody, I'm kinda new at this, so forgive me. I have tried everything under the sun to get this scanner working! I've read the manual again, again and again, even an online one that someone was kind enough to rewrite, and videos, and this blasted thing will NOT trunk scan.

I live in Missouri City, Fort Bend County, Texas. I have the control frequencies in and e ven on open scan I cannot hear anybody!! Any ideas?

Again, sorry if it seems like I don't know what I'm doing, I'm new at this. Thank you for your time to read this!

155.52? Are you serious? That used to be the simplex frequency for Alvin PD back in the
mid 70's when everyone had the hi-band VHF radios and the Motorola systems purchased by the HGAC.

Alvin PD was simplex on 155.520. Katy PD was simplex on another frequency but had the antenna way up high on top of a water tower.

Meanwhile, over in Louisiana, there was a repeater on a big tall tower in Many, Louisiana. The input frequency to the Many repeater was the Katy PD frequency. The output frequency of the Many repeater was the Alvin PD frequency. Everybody also had the same "PL tone."

You couldn't just change the PL tone because every radio in the county would
have to be changed. No one wanted to spend the money. Alvin was on the bottom
of the pile and was getting dumped on by both Katy PD and Many, Louisiana.

Every night we could hear Harris County Fox (helicopter) blasting out on the car-to-car frequency 154.950 covering up all other traffic, and both Katy PD
and Many came in loud and clear on the Alvin PD frequency.
Talk about a friggin' madhouse!

In the daytyime, the Many repeater was not quite strong enough to be heard, but it was strong enough to break squelch on the Alvin primary so the poor dispatcher on duty had to listen to a nearly non-stop, very LOUD rushing noise
like a continuous squelch tail. They couldn't turn the volume all the way down - it was
on their primary frequency.

I remember visiting Alvin PD a few times because the
dispatcher then was a close friend of mine. They had taken 5 or 6 index cards and
taped them with duct tape over the speaker to the Alvin primary radio. This dampened
the shrillness of the squelch noise quite a bit so that normal business could be conducted
in the dispatch room. What a deal.

29545. Stuff for sale Part deaux

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-09-28 02:28:57 UTC
From: Chris Boone
Topic: 29545 Message: 29545

I know Belton is coming up...and right now, I am debating making it...I have a LOT of gear and feedline for sale (and NEED TO GET RID OF IT)but no way to get it to Belton...no thanks to the laptop crashing, I was offline for a while...and some of my emails I missed.....I really need to move this stuff for money...hate to scrap it.....The end of the month is next week...and I have had some interests but not enough to keep me from paying another month of rent UNLESS I can sell some big items.

SO here are some of the thing I can move now and may make Belton to sell more and deliver the gear if possible:
(NOTE all large items are not shippable unless you wish to pay for it OR I will meet you half way between Houston and BMT if you are in the Houston area....I will add a little for the extra gas but not that much..my SUV gets 28mpg)

Heath Warrior HF amp with tubes...WORKS....$175
NC300 (may be 303) rcvr with 6/2/220 converters....condition UNKNOWN....(but clean) $100 obo
Knight T60 transmitter $20
GE MSTR IIe lowband (6m) base/rptr...on 48.5 now...easy to put on 6 and has programmable control shelf to work as basic rptr with IDer (have software)

Comtronix FM200 6m FM only rig (rare bird).....works (20w out)....cover 52-54 with -1Mhz offset $60
GE MSTR II UHF rptrs...75w and 45w models...
Kenwood TKR-750 VHF rptr (does NB).....Version 2.....was asking $800...will consider $750..This is in excellent condition...

MII VHF rptr......xmtr does 150w max....rcvr needs retuning to 2m (was on 155 channel and had 0.2uV sens)
MICOR Base/rptr on 2m...100w cont duty
also have a UHF 100w cont duty amp (FM only)
KLM Echo70 432/435 SSB rig ($40)...get on UHF SSB cheap
220 gear....boards and more
LOTS of duplexers....UHF Bp or BpBr and 220....Also have LOTS of GE MVPs/EXECIIs on lowband,VHF and UHF (most MVPs are UHF)...also Midland 70-530Bs UHF rigs...good down to 430...works as links, packet nodes, etc...
Also have some Kenwood TK880 and other commercial rigs...plus a ICOM IC706 with sep kit and DTMF/RC mic
DB Products DB365 antenna mounts....used but in good shape and you cannot beat them....

125ft of 1 5/8in with NEW in sealed plastic N female connectors...$250 (Connectors are worth more than that alone)

For those items with no price, get with me direct and I will talk deal..I have a lot in storage and want/need to move it asap.....I cannot get into details here...and do not wish do...IF YOU ARE INTERESTED please contact direct only..I will NOT reply via the lists...IF you want any Heliax, I am willing to do a 2:1...buy a piece, get a 2nd free...but pickup

only...if you are not serious, please dont reply. I am sorry but I dont have the time right now..

If someone has a room Friday night for Belton and may want to split the cost for someone on the couch, etc, I would be open to talk to you about that...

All replies all line to setxchris at gmail.com PLEASE...this email account is almost full and I need to clean it up...the gmail account is fairly empty and I get it on the cell phone

Thanks for understanding
Chris

Go to a website called Marks Scanners. It has easer to read manuals for a number of scanners. Just look on the menu and and click on the one that includes the 164. It helped a lot.

Be advised you will have to use a software programming package to set the custom trunking tables, you can't do it from the radio itself.

Fortunately the frequency search tools on Radioreference still work and aren't tied directly to the ULS. You don't need a premium account to search by frequency anymore either - not sure when that changed.

29615. RE: RE: [HoustonScan] fire near wildlife refuge

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-10-09 14:13:39 UTC
From: <eclentz@...>
Topic: 29604 Message: 29615

If Port Arthur FD was involved then it couldn't be Attwater Prairie Chicken NW. This is their location.

Attwater Prairie Chicken National Wildlife Refuge
1206 Apc Nwr Rd
Eagle Lake, TX 77434

You have Anahuac National Wildlife Refuge on Bolivar Peninsula which from the smoke that I saw I don't think it was that either, a bit far for Pt Arthur FD and why not Winnie or Highland FD . Then you have Mcfaddin National Wildlife Refuge just East of High Island which also would be a bit difficult for Pt Arthur FD and should be a HIgh Island FD response.

Sabine Pass National Wildlife Refuge is closer to Orange but The smoke was just ESE of I-10. And then you also have Texas Point National Wildlife Refuge which is just south of Pt Arthur would have been my guess.

Here is the actual location:
JEFFERSON COUNTY - A controlled burn at the J.D. Murphree Wildlife Refuge is producing black smoke over parts of Mid and South Jefferson County.

PAPD Deputy Chief John Owens is the city's Emergency Management Coordinator. He tells KFDM News Texas Parks and Wildlife started the annual controlled burn at about 9 a.m. Monday. It's scheduled to end today.

He said the 200 acre controlled burn is causing black smoke over parts of the area.

---In houstonscan@yahoogroups.com, <kg5ai@...> wrote:

Never caught the coordinates. Might have missed it between the car and getting my inside ears setup. One thing is for sure-you come down Ms. B’s driveway to get to it.
I pulled up the fire detection satellites on Google Earth and see some possible activity 16 miles southeast of Winnie, about 15 miles southwest of Port Arthur.
If that is where it is, there is not a lot around there but marsh/wetlands.

Subject: [HoustonScan] fire near wildlife refuge

Hearing guys on 164.625 PL 107.2 talking about a fire near the Wildlife refuge. It is impending on a structure.
Said Port Arthur was either on scene or coming out to scene.
Was about to give coordinates.
This repeater and PL had been reported at the Attwater Prairie Chicken National Wildlife

Refuge.

166.5625 PL 100.0 had been heard used before for the Anahuac National Wildlife Refuge.

I normally would not have even heard this except I accidentally had my wildfire bank activated.

29617. Cracked rubber duck

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-10-13 15:32:10 UTC
From: Myles Barkman
Topic: 29617 Message: 29617
Attachments: 1 described; binary payloads are missing from this source WARC

Noticed the antenna on the BCD396XT has cracked nearly all the way around. Been thinking of getting one of those 800 MHz scanner antennas from Radio Shack since much of the activity around here is trunked now. Possible fixes for this though include glue or combination of glue and heat shrink.

All rubber ducks do that, especially here. It's due to loss of their plasticizer...seriously.

From: Myles Barkman
Topic: 29628 Message: 29634

I told my wife when I was going there that they better not start that crap with me when I go in.

I went in fully expecting them to try selling me a phone and the dude behind the counter welcomed me and asked what I wanted.

I told him I was looking for the scanner antennas and he asked me to repeat (so either he didn't hear me or I was afraid he didn't have a clue what I was talking about since I didn't say the word "phone").

He told me where they were, there was only one on the peg, I paid for it and left. No muss, no fuss.

Didn't even have to give them my address, name and phone number (remember that?).

I did my homework, looking up the part and taking a picture of it with the catalog part # in case I had to do battle with some twerp.

Some observations about the reception between the new antenna and the stock antenna.

The Pearland site is my closest analog site and the new antenna picks it up with 5 bars more consistently throughout the house. Stock antenna gets anywhere from 2-5 bars.

Can pick up Alvin, Baytown, Angleton and League City better but also not much of a signal.

Missouri City is nearly unreadable with the stock antenna but can pick it up better with 800 antenna.

Don't see much difference picking up Pasadena and Texas City.

Could barely pick up the control channel on the Downtown site if I hold the radio just right with new antenna but not at all with stock.

On digital, new one helps me pick up part of the control channel better on the Houston simulcast but still too weak to decode.

Fort Bend simulcast comes in a little better but still rough.

League City goes from 0-1 with stock to 1-2 with new.

Not much traffic on the Baytown P25 site but appears to pick it up better with new antenna.

Signal is better on the City of Houston Government Services site 305 too.

Just to see how well it works on VHF, I tried it on NOAA Weather radio, 162.55 and it was a tad weaker with the 800 MHz antenna.

With the stock antenna, I was barely able to pick up 162.400 from Tomball but the 800 antenna could not hear it.

UHF didn’t seem to show much difference.

Using the new 800 antenna adds about 1-3/4” of length, partly due to using an adapter with the BNC connection that comes with the antenna.

So for someone who uses their scanner to primarily pick up the 700/800 MHz trunking systems around here, it is an improvement, and will work well picking up all but some of the weakest VHF/UHF signals.

You should be able to get good reception from the Alvin-Dickinson site
also.
I have heard that site on my mobile 996XT even way up in DT Houston.
It was weak but readable. It also does well in the museum district.

Right now I only use the sites at Pearland, Alvin-Dickinson, League City,
and Angleton. They all carry the same traffic except for the fire and EMS
pages which are handled only by the local tower, which makes perfect sense.
No need to send a Pearland fire or EMS page over the Angleton tower for
example.

What I like about the 996XT is that I can turn "on" or "off" different
towers
as I move through the area. This is much better than letting a GPS unit
do it automatically, since the coverage areas overlap one another anyway.

What I don't like about the PSR-800 is you cannot do that from the face of
the scanner itself. You have to use the pc software.

I have an 800 MHz rubber duck I ordered online that is 9 inches long
and has 2 yellow bands around the tip of the antenna. There is no name
on it, but it works better than the RS rubber duck, which I also have.

Using the PSR-800 there has never been anything that I could not monitor
when I knew where to look for it. Aircraft, weather, 700 Mhz, 800 MHz, hams
all work well. I would even go so far as to say the rubber duck on my
PSR-800
outperforms my 996XT mobile antenna by a landslide.

So it finally broke all the way around. I didn't even over flex it. Guess
just being left in the car while I'm at work, even with these lower temps
did it in. Easily slides up and down now. May get that antenna at RS today.

Has CCEMS changed dispatch methods? Am hearing calls dispatched but no further traffic ie unit en route or on scene etc. Also signal sounds digital this morning. I use broadcastify to monitor. My thanks in advance to anyone who can shed some light on this for me.

OOPS! Sorry....I mis-read the original question when I sent the Fox TG info.
You of course already know that part!

Any (all ?) HPD towers "can" carry a talkgroup, such as the Fox, but first the
radio (Fox in this case) has to be in close proximity to a tower and affiliate
itself to that tower. Since Fox could be anywhere, it is just a guessing game
as to if and when you may hear it on a particular tower.

That brings up an interesting question.
Would we all agree that Fox would be transmitting from a "very high"
antenna?

What would prevent it from affiliating to multiple towers at the same time?

Would digital simulcast propagation be an issue here?

Does anyone know if the Thunderbirds or Blue Angels will perform at Wings Over Houston?
Thanks in advance!

Steve,

Negative. No military acts were scheduled due to sequestration before the shutdown.

As Judge Emmett told us during Hurricane Ike...Hunker Down!!

HAZARDOUS WEATHER OUTLOOK
NATIONAL WEATHER SERVICE HOUSTON/GALVESTON TX
503 AM CDT WED OCT 30 2013

TXZ163-164-176>179-195>200-210>214-226-227-235>238-311015-
AUSTIN-BRAZORIA-BRAZOS-BURLESON-CHAMBERS-COLORADO-FORT BEND-
GALVESTON-GRIMES-HARRIS-HOUSTON-JACKSON-LIBERTY-MADISON-MATAGORDA-
MONTGOMERY-POLK-SAN JACINTO-TRINITY-WALKER-WALLER-WASHINGTON-
WHARTON-
503 AM CDT WED OCT 30 2013

THIS HAZARDOUS WEATHER OUTLOOK IS FOR PORTIONS OF SOUTHEAST TEXAS.

.DAY ONE...TODAY AND TONIGHT

PERIODS OF SHOWERS AND THUNDERSTORMS ARE EXPECTED TODAY. DUE TO
THE FAST STORM MOVEMENT...ANY ISOLATED STRONGER CELLS THAT MANAGE
TO DEVELOP WILL BE CAPABLE OF PRODUCING 35 TO 50 MPH WIND GUSTS.
THERE IS ALSO A REMOTE CHANCE OF A BRIEF TORNADO AS WELL. SHOWER
AND THUNDERSTORM COVERAGE AND THE TREAT OF HEAVY RAINFALL WILL
FURTHER INCREASE LATE TONIGHT AS A FRONTAL BOUNDARY MOVES INTO
SOUTHEAST TEXAS.

.DAYS TWO THROUGH SEVEN...THURSDAY THROUGH TUESDAY

HEAVY RAINFALL ALONG AND AHEAD OF THE FRONT SHOULD PRODUCE AVERAGE
ACCUMULATIONS OF 1 TO 3 INCHES ACROSS ALL OF SOUTHEAST TEXAS
THROUGH THURSDAY AFTERNOON. DUE TO NEAR RECORD AMOUNTS OF AVAILABLE
MOISTURE...LOCALIZED 5 TO 7 INCH AMOUNTS ARE POSSIBLE WHERE ANY
TRAINING OCCURS. THERE IS ALSO A SLIGHT RISK SEVERE THUNDERSTORMS
WITH STRONG DAMAGING WINDS AND ISOLATED TORNADOES. THE TREAT OF
HAZARDOUS WEATHER WILL END NORTHWEST TO SOUTHEAST DURING THE MID
AND LATE AFTERNOON HOURS THURSDAY. THE BULK OF PRECIPITATION
SHOULD BE OFFSHORE BY 7 PM.

.SPOTTER INFORMATION STATEMENT...

SPOTTER ACTIVATION MAY BE REQUIRED ANYTIME BETWEEN TODAY AND
THURSDAY AFTERNOON. PLEASE SEND ANY FLOODING OR SEVERE WEATHER
REPORTS TO US VIA TWITTER @NWSHOUSTON.

So, what about scanners? I think they would let you use GPS at cruising altitude but they never liked scanners because of the incidental radiation.

Subject: CNN Breaking News

The Federal Aviation Administration will allow airlines to expand passengers' use of portable electronic devices during all phases of flight, the agency announced today, but cell phone calls will still be prohibited.

Airlines are now being given guidance on the new policy, FAA Administrator Michael Huerta said. Implementation will vary among airlines, the FAA added, due to differences among fleets and operations. But the agency expects many carriers to show that their planes allow passengers to safely use their devices in airplane mode, gate-to-gate, by the end of the year.

In a statement, the FAA said it reached its decision after consulting a group of experts that included representatives from the airlines, aviation manufacturers, passengers, pilots, flight attendants and the mobile technology industry.

Passengers will eventually be able to read e-books, play games and watch videos on their devices during all phases of flight, with very limited exceptions, the FAA said. Devices must be held or put in the seat-back pocket during the actual takeoff and landing.

Cell phones should be in airplane mode or with cellular service disabled - no signal bars displayed -- and cannot be used for voice communications due to FCC regulations that prohibit any airborne calls using cell phones, the agency said.

If an air carrier provides Wi-Fi service during flight, passengers may use it. Short-range Bluetooth accessories, like wireless keyboards, can also be used.

"We believe today's decision honors both our commitment to safety and consumers' increasing desire to use their electronic devices during all phases of their flights," said Transportation Secretary Anthony Foxx. "These guidelines reflect input from passengers, pilots, manufacturers, and flight attendants, and I look forward to seeing airlines implement these much anticipated guidelines in the near future."

I don't see a problem if the radios can't transmit or receive encrypted channels. I'm still surprised the local media has not put up a fight to have access to the system or purchase a real radio and the city program the radio.

ROTFL - Do we really need to be told by the FCC not to make
cell phone calls at 37,000 feet? Nothing like being 7 miles above
the nearest cell tower. And I bet handoffs are a bitch!

You'd be lucky to make a cell phone call on the ground from
7 miles away. Can you hear me now?

Subject: CNN Breaking News
The Federal Aviation Administration will allow airlines to expand
passengers' use of portable electronic devices during all phases of flight, the
agency announced today, but cell phone calls will still be prohibited.

Airlines are now being given guidance on the new policy, FAA Administrator
Michael Huerta said. Implementation will vary among airlines, the FAA
added, due to differences among fleets and operations. But the agency expects
many carriers to show that their planes allow passengers to safely use their
devices in airplane mode, gate-to-gate, by the end of the year.

In a statement, the FAA said it reached its decision after consulting a
group of experts that included representatives from the airlines, aviation
manufacturers, passengers, pilots, flight attendants and the mobile
technology industry.

Passengers will eventually be able to read e-books, play games and watch
videos on their devices during all phases of flight, with very limited
exceptions, the FAA said. Devices must be held or put in the seat-back pocket
during the actual takeoff and landing.

Cell phones should be in airplane mode or with cellular service disabled -
no signal bars displayed -- and cannot be used for voice communications
due to FCC regulations that prohibit any airborne calls using cell phones,
the agency said.

If an air carrier provides Wi-Fi service during flight, passengers may use
it. Short-range Bluetooth accessories, like wireless keyboards, can also

be used.

"We believe today's decision honors both our commitment to safety and consumers' increasing desire to use their electronic devices during all phases of their flights," said Transportation Secretary Anthony Foxx. "These guidelines reflect input from passengers, pilots, manufacturers, and flight attendants, and I look forward to seeing airlines implement these much anticipated guidelines in the near future."

The system key can be changed, over the air, at the drop of a hat.

That's how they deal with "lost" or stolen radios. Any radio not
authorized to be on the system does not get upgraded with the
new system key.

That was one of the requirements for the new
radio system that I read about in the City of Houston description
and documentation. There is a pneumonic name for it but I
cannot remember what it is right now.

I understand that some channels for undercover operations should be encrypted, but not fireground operations or on scene "suspect at large" communications. Are you comfortable not knowing if there's a homicide, officer involved shooting, SWAT, home invasion, robbery, pursuit, child abduction, fire, explosion, haz mat release or some other situation that can possibly put you and your family in danger? Don't count on it always being on the news.

The system key can be changed, over the air, at the drop of a hat.

That's how they deal with "lost" or stolen radios. Any radio not
authorized to be on the system does not get upgraded with the
new system key.

That was one of the requirements for the new
radio system that I read about in the City of Houston description
and documentation. There is a pneumonic name for it but I
cannot remember what it is right now.

I miss listening to the "back channels", but I don't believe it's our "right" to be able to listen, it's a privilege.

Anyone with a P25 capable trunking scanner can listen to ALL HCSO/HPD/HFD dispatch channels.

You should be complaining about Bellaire and West U PD/FD dispatch being encrypted. ;-)

Just curious...

How would having the TAC channels have helped? The call goes out on the dispatch channel, units arrive and probably don't talk much after that.

Maybe I'm missing something???

I don't see a problem if the radios can't transmit or receive encrypted channels. I'm still surprised the local media has not put up a fight to have access to the system or purchase a real radio and the city program the radio.

Anyway, I'm done as this has gotten waaay OT.

Feel free to keep debating this without me.

5.76 kHz rules!

Kevin Chessher <kchessher@comcast.net> wrote:Just curious...

How would having the TAC channels have helped? The call goes out on the dispatch channel, units arrive and probably don't talk much after that.

Maybe I'm missing something???

Marvin Suggs <m_suggs@comcast.net> wrote:

□

yeah wonder how many people are shot, killed or just go missing now, and we never even know. maybe hours or days later they'll put out a press release. i had an HPD officer tell me about a shooting a couple weeks ago and asked me how the news missed it.....oh well. and a press release isn't normally put out unless a reporter calls the PIO and inquires about a specific incident, but you have to know the incident occurred.

It makes their jobs easier not to have to worry about wrecker drivers, media, or whoever showing up to their scenes. In the beginning you could hear the BPD dispatcher but now you can't. Sometimes they forget to turn it off. They have a history of shooting unarmed people maybe that's why they are encrypted.

29740. Re: [HoustonScan] Re: Rumor

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-11-01 20:48:53 UTC
From: Marvin Suggs
Topic: 29706 Message: 29740

OK first off HFD: since we can't monitor the tac channels we don't get up to date, real time information about the severity of the fire, number of injuries, deaths, direction the fire is spreading or if the public is in danger until we send someone to the scene. We can contact the PIO and maybe they'll issue a statement hours or days later. Granted we check the HFD status website and check on fires that are still active 15 minutes later when the webpage refreshes. As far as shootings go, all we get is the initial dispatch and nothing else, no patient assessment, number of patients or any other information. So we have to respond to every shooting call, where most are false alarms. HPD usually switches to a tac channel when they have officers on the ground looking for suspects, so it would help us if we knew descriptions, directions of travel, what they are wanted for and if they are armed. Just so we could warn the public and maybe even assist in the search using our helicopter. Several weeks ago HFD dispatched an Alert III (plane crash) at Bush Airport late at night. It was instantly a 2 alarm response. So i didn't know if it was real or not. After hearing from the PIO an hour later, he told me it was just condensation in the cockpit of a FedEx plane. So monitoring the TAC channels is very important for the media to accurately report an event.

You actually ARE missing something -- and a LOT of it.

These days almost ALL police cars have an MTC (or whatever it is called) mounted right
there in the patrol car. It is a laptop computer. They get their calls or "slips" directly
from the pc screen and they can check enroute and put themselves out on the scene and
clear the call, ALL without ever having to talk on the radio. They can also do DL checks
and criminal histories and run license plates all without ever keying a mic. In the "old"
days the dispatcher had to do all that stuff verbally over the air.

Verbal calls today are a far cry from 20 years ago. The airwaves are very quiet today.
No one "needs" to talk on the radio to conduct most of their affairs. Pursuits, fires,
wrecks, EMS calls and disturbances in progress would be exceptions.

The biggest problem with the MTC is that they DON'T work or update about as often
as they actually do work properly. Listen to any local police, sheriff, and even HPD
and HFD and there are frequent complaints about the MTC not updating, or freezing
up, etc.

My PSR-800 can record audio from the radio channels. I have listened to my local
police, fire, and EMS and sometimes they can go three to four HOURS and they
never say a word over the air about anything. You know that "stuff" has to be happening out there, you
just don't hear about it as much today because of the "advances" (??) in technology.

Interestingly enough they also have another top secret avenue of communication that they use a bunch for very secure communications.

It's called a cell phone.

Topic: 29706 Message: 29745

That's the whole point. That's how it is supposed to work.

The lost or stolen or "unauthorized" radios are
prevented from accessing the system any longer. They would not be able
to "affiliate" to the system and thus not able to transmit.

But "authenticated" radios which are supposed to be on the system will
get the new system key and continue to operate. But that is just for the
transmit side of the radio.

At least that is how I understand the system is supposed to work.

There are many steps to authentication so I am sure they can keep
track of who is and is not allowed on the system and block accordingly.
Each radio transmits a unique ID anyway. That's how they can tell whether
it was John or Jim who keyed his mic without saying anything. They can
shut individual radios down.

I don't think they can prevent a radio, authorized or not, from receiving
traffic
over those radio channels. If they could do so there would not BE any
scanners
out there working on public safety freqs. It may come down to that
someday.

OK, not impossible, but once changed you could no longer communicate on
the system that just changed it.

The system key can be changed, over the air, at the drop of a hat.

That's how they deal with "lost" or stolen radios. Any radio not authorized to be on the system does not get upgraded with the new system key.

That was one of the requirements for the new radio system that I read about in the City of Houston description and documentation. There is a pneumonic name for it but I cannot remember what it is right now.

Topic: 29706 Message: 29747

The system key remains the same. The radios are sent a stun kill command and they are a brick, doorstop, fishing weight. They cannot stun a scanner. I personally love Motorola radios. I would love an apx7000 VHF-700/800 MHz radio. But..... I can't afford to have a $5000 paperweight. Therefore I have a VHF-UHF apx7000 for my ham and other ps stuff and I have a scanner for 7/800. And I can guarantee you that nobody can brick my scanner.

29752. Extender 90 on 123.2

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-11-02 21:58:28 UTC
From: Eric C. Carlson
Topic: 29752 Message: 29752

On October 28 in Houston, I caught "Extender 90" calling "ops" advising 30 minutes out. There are some licenses for Bell Helicopter and Lockheed Martin in the DFW area and Amarillo. I've heard activity on this frequency before including the "90" aircraft but haven't confirmed the user.

From: leslie bartosh, kd5yyr
Topic: 29752 Message: 29765

Hi All:

Thanks for the responses.

Yes I was trying to avoid the drive to Tomball.

From this side of town it takes a while to get there and back.
Of course it should be a little quicker since I am no longer on the Island. HI!

Worth has done some work for me in the past and did a great job.
I was just trying to save some time.

Thanks all

Subject: Re: [HoustonScan] Re: Rumor

The system key can be changed, over the air, at the drop of a hat.

That's how they deal with "lost" or stolen radios. Any radio not

authorized to be on the system does not get upgraded with the

new system key.

That was one of the requirements for the new

radio system that I read about in the City of Houston description

and documentation. There is a pneumonic name for it but I

cannot remember what it is right now.

And don't forget to check RR for the trunked system called Reliant Center.
They have several channels in there specifically for the Texans.
Just sift through the list.

I nearly put them in my PSR-800 a few minutes ago but I live
too far away to hear them, and I doubt I would ever carry the
scanner into the stadium for security reasons. It would just be
one more cumbersome item to keep track of. The noise level
inside would probably make hearing the scanner impossible
anyway, even with earbuds.

But the channels are out there if you want them.

Minor correction: OTAR (Over The Air Rekey) only handles loading of traffic encryption keys (TEKs.) Reprogramming is handled via OTAP/POP25 (Over The Air Reprogramming/Programming Over P25.)

Radio inhibit (aka stun/disable) is its own function within the trunking protocol. It has been around since the early Smartnet days and cannot be accessed through normal programming means, except to view as a greyed-out checkbox in current versions of Motorola CPS.

There are some interesting insights into the relationship between Houston and Motorola in the FCC filings about the city's attempt to waive the narrowbanding rules while they implemented the new trunked system.

Specifically, this response to the city's waiver request is of note:

<http://apps.fcc.gov/ecfs/document/view?id=7022068540>
http://apps.fcc.gov/ecfs/document/view?id=7022068540

City's waiver request:
<http://apps.fcc.gov/ecfs/document/view?id=7022066653>
http://apps.fcc.gov/ecfs/document/view?id=7022066653

The way this is written that means Amateur Radio Operators (HAMS) who are licensed
by the FCC cannot put a ham rig in the truck. With no ham rig, which is a two-way radio, and no scanner either, how the heck are the guys supposed to get their calls? A private towing company is a business. Does that also mean a business band radio is not allowed either? It's a two-way radio.

I understand the part about not transmitting on the law enforcement channels, but the rest is unfair, unreasonable, and unworkable. Sorta like Obamacare.

Sounds like the wrecker drivers need to hire a good lawyer.

Read the first sentence again and STOP at the "or" after the word
"scanner."
The way that is worded it is saying ANY type of two-way radio is forbidden.

The rest of that sentence after the "or" is the part that includes
two-ways that can transmit on LE frequencies.

What that first sentence plainly says is you cannot have a two-way radio,
you cannot have a scanner, and you cannot have a two-way radio that can
transmit on law enforcement frequencies.

Notable items:

Request for approval of an annual license agreement with American Towers, LLC, for
lease of an antenna site at 315 Happy Hollow in Dickinson for Information Technology’s radio communications equipment at an annual cost of $50,085 for the
period of January 1-December 31, 2014.

Harris Corporation, RF Communications Division, and Motorola Solutions, Inc., for multi-band subscriber radios for the county for the period of January
29, 2014-January 28, 2015 at a total cost of $3 million.

E.F. Johnson Company; Motorola Solutions, Inc.; and Relm Wireless Corporation for Public Safety Project 25 subscriber radios for the county for the
period of January 29, 2014-January 28, 2015 at a total cost of $3 million.

City of Houston in connection with the joint radio communications facility, increasing the project cost by $1 million with each party paying a 50% share,
for appropriate officials to take necessary actions to complete the transaction,
and for the Budget Office to transfer $500,000 to the project construction account.

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-11-09 19:30:02 UTC
From: <daysand16@...>
Topic: 29805 Message: 29805

I sure do not like The New (to me) Yahoo HoustonScan.
I much preferred the older HoustonScan layout.

With this New (to me) Yahoo HoustonScan, I am unable to find a way I can edit a message that I have posted.

I will say I am thankful that there is a HoustonScan available for us in Houston.

29806. Metropolitan Transit Authority of Harris County Talkgroups

From: <daysand16@...>
Topic: 29806 Message: 29806

Has Metropolitan Transit Authority of Harris County Talkgroups changed frequencies.
I have not heard them lately.
Have they gone the same way as HPD?

I did a search through the messages, but did not find any info. of the Metropolitan Transit Authority of Harris County Talkgroups making any changes.

Read the first sentence again and STOP at the "or" after the word "scanner."
The way that is worded it is saying ANY type of two-way radio is forbidden.

The rest of that sentence after the "or" is the part that includes
two-ways that can transmit on LE frequencies.

What that first sentence plainly says is you cannot have a two-way radio,
you cannot have a scanner, and you cannot have a two-way radio that can
transmit on law enforcement frequencies.

The way this is written that means Amateur Radio Operators (HAMS) who are licensed
by the FCC cannot put a ham rig in the truck. With no ham rig, which is a
two-way radio, and no scanner either, how the heck are the guys supposed
to get their calls? A private towing company is a business. Does that also
mean a business band radio is not allowed either? It's a two-way radio.

I understand the part about not transmitting on the law enforcement
channels, but the rest is unfair, unreasonable, and unworkable. Sorta
like Obamacare.

Sounds like the wrecker drivers need to hire a good lawyer.

Skip ahead to 18:45 on the video to get to the meat and potatoes.

BCD436HP hand-held $499

Does APCO 25 Phase 1 and 2 and X2 TDMA.

Double display size

Calls it Trunktracker V technology.

4GB memory card. Can record audio. Will support up to 32GB card.

Has entire US and Canada databases on memory card.

Advanced analysis and discovery mode (bandscope, trunking analysis, RF power plot)

3 AA batteries (8 hrs or more) charge through USB port

BCD536HP mobile/base $599

Has WiFi feature for remote access and control

Can listen and control with app from anywhere you have internet access

Releasing both models in January 2014.

More info at http://info.uniden.com/Newscanners

I think the handheld does have GPS but not Wi-Fi. Why would you want a Wi-FI on the handheld anyway. It's usually in the car with you anyway.

In the video Paul said that either unit could connect to the external GPS that Uniden is selling so the answer to GPS onboard was clearly a "No".

Also if you look at the base/mobile 536, the WiFi is actually an external component, separate from the main chassis.

Could it be that having either integrated in the case could have issues, ie shielding for the RF components interfere with GPS/WiFi reception (or the inclusion in the case may cause RF desense), likewise with WiFi they may have to move it to another, separate "puck" to pass FCC muster. Likewise since the base/mobile case is Metal, that would have interference with the signals as well, resulting in the need for additional, external antennas.

Good points about the base/mobile
As for the handheld, when using the database traveling (which is really nice not having to enter systems as you go) integrated GPS would of been great, plugging and unplugging all the extra wires, power cable/GPS gets old!
Integrated Wi-Fi would allow you to put the unit in an area of good reception, lets say in a hotel room by the window, or at a friends house upstairs, temporarily hooked to an external antenna, etc. (think outside the box!) and use the smart phone/tablet app to monitor the radio when you wouldn't otherwise get good reception carrying it around at a specific location. Also not to mention one less cable for programming and updating the unit.
Funny, they seem to have managed to have all these features in a cell phone for many years now ....
I feel Uniden made a good effort and Paul is responsive and has listened to the consumer but it's always that "something that could of been there" on every new radio offering through the years that makes the difference between good and great ..... Just my thoughts.

Always keep them wanting more. If they put it all in there, it would probably cost another $100-$200.

I sure would like to hear how it sounds on a LSM system with TDMA.

The video posted on RR shows it working on a Phase 1 A25 site in BFE, Montana. My 10 year old Pro-96 will work on that.

Integrated Wi-Fi would allow you to put the unit in an area of good reception, lets say in a hotel room by the window, or at a friends house upstairs, temporarily hooked to an external antenna, etc. (think outside the box!) and use the smart phone/tablet app to monitor the radio when you wouldn't otherwise get good reception carrying it around at a specific location. Also not to mention one less cable for programming and updating the unit.
Funny, they seem to have managed to have all these features in a cell phone for many years now ....
I feel Uniden made a good effort and Paul is responsive and has listened to the consumer but it's always that "something that could of been there" on every new radio offering through the years that makes the difference between good and great ..... Just my thoughts.

In the video Paul said that either unit could connect to the external GPS that Uniden is selling so the answer to GPS onboard was clearly a "No".

Also if you look at the base/mobile 536, the WiFi is actually an external component, separate from the main chassis.

Could it be that having either integrated in the case could have issues, ie shielding for the RF components interfere with GPS/WiFi reception (or the inclusion in the case may cause

RF desense), likewise with WiFi they may have to move it to another, separate "puck" to pass FCC muster. Likewise since the base/mobile case is Metal, that would have interference with the signals as well, resulting in the need for additional, external antennas.

GPS doesn’t always work very well unless it’s in the window of a vehicle. I really don’t mind putting the GPS puck on the dash and the radio in the console. They really need to use a better connector on the new radios than the one on the HP-1.

I’m sure the radios will work well on the Houston systems since they have been tested in this area and of course Ft Worth Dallas Metroplex.

That is excellent decode quality for the Plano system. It would be a comparable test to the Beltway Simulcast (site 52) or Montgomery County.

Of course he was obviously at a fixed location and we have no idea if he was receiving through any RF filtering or an optimized antenna system.

Guess I’ve been ignorant regarding this whole “LSM” thing that’s been going on with trunking systems.

What systems local to Houston (if any) us it?

It stands for Linear Simulcast Modulation and is a flavor of P25.

Paul Opitz put up this recording of the audio off a trunked radio system in the DFW area from a BCD536HP scanner:

http://info.uniden.com/twiki/pub/Unidenman4/BCD536HP-Beta/PAWM_Search.mp3

I want Paul to produce a recording of the Zone 3 TDMA talkgroups.

155.52? Are you serious? That used to be the simplex frequency for Alvin PD back in the
mid 70's when everyone had the hi-band VHF radios and the Motorola systems purchased by the HGAC.

Alvin PD was simplex on 155.520. Katy PD was simplex on another frequency but had the antenna way up high on top of a water tower.

Meanwhile, over in Louisiana, there was a repeater on a big tall tower in Many, Louisiana. The input frequency to the Many repeater was the Katy PD frequency. The output frequency of the Many repeater was the Alvin PD frequency. Everybody also had the same "PL tone."

You couldn't just change the PL tone because every radio in the county would
have to be changed. No one wanted to spend the money. Alvin was on the bottom
of the pile and was getting dumped on by both Katy PD and Many, Louisiana.

Every night we could hear Harris County Fox (helicopter) blasting out on the car-to-car frequency 154.950 covering up all other traffic, and both Katy PD
and Many came in loud and clear on the Alvin PD frequency.
Talk about a friggin' madhouse!

In the daytyime, the Many repeater was not quite strong enough to be heard, but it was strong enough to break squelch on the Alvin primary so the poor dispatcher on duty had to listen to a nearly non-stop, very LOUD rushing noise
like a continuous squelch tail. They couldn't turn the volume all the way down - it was
on their primary frequency.

I remember visiting Alvin PD a few times because the
dispatcher then was a close friend of mine. They had taken 5 or 6 index cards and
taped them with duct tape over the speaker to the Alvin primary radio. This dampened

the shrillness of the squelch noise quite a bit so that normal business could be conducted
in the dispatch room. What a deal.

I'm not smart, but with the band opening this morning you probably have several choices for the source. I'd bet once the atmosphere warms up it stops.

Little bit of digging in old issues of Police Call and on Radioreference filled in the blanks on this little piece of history.

Katy PD was on 156.09. The repeater in Many was used by Sabine Parish Sheriff's Office – input on 156.09, output on 155.52. They are still licensed for it and use it for their Channel 2 now: http://www.radioreference.com/apps/db/?ctid=1151. No tones have been identified so they may or may not still be using the 146.2 tone that was the default for HGAC way back when.

PTRA police are still carrying XTS2500s on 2318. They (and probably BNSF and UP) primarily use their 800 radios to monitor sheriff's dispatch of whatever county they're in. I heard a UPR unit request a 28/29 check on DPS B last summer.

Keep in mind that railroad police departments aren't dispatched like typical police agencies - they patrol their territory or hang out at the yard office until needed, when they are contacted by phone. They monitor road channels but almost never talk on them.

systems. Also all the people programming them.

Anyone else heard this?

I heard that repeater on 2013/06/13 and I marked it as being on the Hartman Bridge. I'm pretty sure it IDs "HARTMAN" or something similar in CW AFSK.

Doesn't show to be licensed in Texas. Being a border offset frequency it's probably in Mexico then.

Doesn't answer your question, just a little info.

Rptr IDs are not sent in Afsk Mode...if they are, it's not ear copy-able CW by any means... AFSK need demodulators to decode the characters (other than RYRYRYRYRY which is a known rhythm)...

I think you're mistaking AFSK generally --- which includes MCW, which is what CW identifiers are normally sent using --- for ASCII or Baudot RTTY, which are particular forms of AFSK (when the mark and space tones are sent using FM), or perhaps you're thinking of FSK. MCW is slow, but it's still a form of AFSK.

Only thing I see licensed in that area is the cell pole about 800 feet west of FM 359 along that ditch.

Try to get some pictures of whatever is attached at the base of the pole or any signage.

Which way is that dish pointed? Kind of looks like southeast.

If your talking about the 'grid" antenna I believe that was for the now defunct(?) wireless internet service that used to serve Ft.Bend County. It use to be run by one guy, I met him several times at other tower sites. He used to take care of the infrastructure plus the subscriber equipment by himself... waaay too much work for one person.

But I'm not positive that's what it's for.

ARLX013 ARRL Granted Use of W1Ã☐Ã☐AW for League's Centennial

ZCZC AX13

QST de W1AW

Special Bulletin 13 ARLX013

From ARRL Headquarters

Newington CT December 5, 2013

To all radio amateurs

SB SPCL ARL ARLX013

ARLX013 ARRL Granted Use of W1Ã☐Ã☐AW for League's Centennial

The FCC has authorized the Maxim Memorial Station W1AW to also use the call sign W1Ã☐Ã☐AW during 2014, the ARRL's centennial year.

Contacts made from the Maxim Memorial Station in Newington, from regional Centennial conventions, and during the IARU HF Championship will use W1Ã☐Ã☐AW, with portable designators as appropriate. The "W1AW WAS" operations throughout 2014 from each of the 50 states will use W1AW, not W1Ã☐Ã☐AW.

Bulletins and code practice transmissions during 2014 also will still use W1AW. Contacts with W1Ã☐Ã☐AW will be worth 100 points in the ARRL Centennial QSO Party. To help kick off the ARRL Centennial, special W1Ã☐Ã☐AW activity will begin at 0500 UTC on January 1, 2014 (midnight in Newington), and will include participation in ARRL's Straight Key Night; one CW station will use

Hiram Percy Maxim's straight key. Activity will continue throughout New Year's Day.

That was my first thought, but the parabolic grid antenna is either 900 MHz or 2.4 GHz. Fort Bend's control license is on 72 MHz:

That is not how I read the RadioReference page on TxWARN. The “government” site is indeed 5 of several others. Whether it’s really a single site or several ”subsites” is academic (although I wonder how a single active control could be valid for separate subsites). The thing that irks me is when people don’t even pay attention to information that has appeared in this group. To wit, it isn't correct to assume you need TDMA to hear HFD and HPD. It’s not true. In fact, the only channels that are exclusively TDMA are also encrypted so you won't be hearing them anyway. J All of the unencrypted channels have FDMA equivalents that are broadcasted exclusively through the “General Government Services” site, 5, of RFSS 3. However, using that turgid terminology appears to baffle most group members.

I was arguably over-simplifying for the masses. Got that? J

Now, I strongly suspect HPD/HFD won't stay so scanner-friendly forever, but that's the stuff of a totally separate thread.

You're probably correct, all this newfangled P25 stuff is confusing.

I can barely run 4 instances of RSSIMon and ZOC on the same computer capturing CC data plus HOST/DSP data with each APX7000 needing it's own static IP and then interpreting that data plus ATIA data to see why a radio bonked. :-P

Subject: Re: [HoustonScan] scanner for XMAS

You're probably correct, all this newfangled P25 stuff is confusing.

I can barely run 4 instances of RSSIMon and ZOC on the same computer capturing CC data plus HOST/DSP data with each APX7000 needing it's own static IP and then interpreting that data plus ATIA data to see why a radio bonked. :-P

On 12/8/2013 6:18 PM, Scott Royall wrote:

That is not how I read the RadioReference page on TxWARN. The “government” site is indeed 5 of several others. Whether it’s really a single site or several ”subsites” is academic (although I wonder how a single active control could be valid for separate subsites). The thing that irks me is when people don’t even pay attention to information that has appeared in this group. To wit, it isn't correct to assume you need TDMA to hear HFD and HPD. It’s not true. In fact, the only channels that are exclusively TDMA are also encrypted so you won't be hearing them anyway. J All of the unencrypted channels have FDMA equivalents that are broadcasted exclusively through the “General Government Services” site, 5, of RFSS 3. However, using that turgid terminology appears to baffle most group members.

I was arguably over-simplifying for the masses. Got that? J

Now, I strongly suspect HPD/HFD won't stay so scanner-friendly forever, but that's the stuff of a totally separate thread.

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I'm having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

Simulcast is controlled interference, just like CDMA cell service.

That is not how I read the RadioReference page on TxWARN. The “government” site is indeed 5 of several others. Whether it’s really a single site or several ”subsites” is academic (although I wonder how a single active control could be valid for separate subsites). The thing that irks me is when people don’t even pay attention to information that has appeared in this group. To wit, it isn't correct to assume you need TDMA to hear HFD and HPD. It’s not true. In fact, the only channels that are exclusively TDMA are also encrypted so you won't be hearing them anyway. J All of the unencrypted channels have FDMA equivalents that are broadcasted exclusively through the “General Government Services” site, 5, of RFSS 3. However, using that turgid terminology appears to baffle most group members.

I was arguably over-simplifying for the masses. Got that? J

Now, I strongly suspect HPD/HFD won't stay so scanner-friendly forever, but that's the stuff of a totally separate thread.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@conchbbs.com> wrote:Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I’m having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

One word: Wow!

Talk about a really fragile solution. I can see why the FBI might use it, since the alternative could have been radios with thousands of channels. But locally? That raises a lot of questions about how much redundancy do you really need with FDMA and TDMA nets.

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

And who I work for is academic.

Regardless of the manufacturer, all simulcast systems work in basically the same way.

So far I've said absolutely nothing defending the system performance as that wasn't the topic of discussion.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@conchbbs.com> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I’m having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I'm having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Subject: RE: [HoustonScan] scanner for XMAS

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Well, depending on the scope of the discussion, my comment below could be unfair since we were originally talking about the General Government Services (virtual) site. That’s not something I would call mission-critical, but the Public Safety sites are also simulcast. I’m sure you'd agree those are mission-critical, and history teaches us over and over that making anything more complicated than it needs to be is risky.

If, by "mobile computer" you are referring to the onboard MCT or MDT
(mobile data terminal),
or whatever the agency calls it -- EVERY agency I listen to has trouble
with the
computers. They are always having to get dispatch to clear their calls for
them
because the MDT won't work or "hangs." Just listen to an agency for
awhile and
you will hear them complain.

BUT the mobile computers have nothing at all to do with the radio network.

Whether it’s really a single site or several ”subsites” is academic (although I wonder how a single active control could be valid for separate subsites). The thing that irks me is when people don’t even pay attention to information that has appeared in this group. To wit, it isn't correct to assume you need TDMA to hear HFD and HPD. It’s not true. In fact, the only channels that are exclusively TDMA are also encrypted so you won't be hearing them anyway. J All of the unencrypted channels have FDMA equivalents that are broadcasted exclusively through the “General Government Services” site, 5, of RFSS 3. However, using that turgid terminology appears to baffle most group members.

I was arguably over-simplifying for the masses. Got that? J

Now, I strongly suspect HPD/HFD won't stay so scanner-friendly forever, but that's the stuff of a totally separate thread.

Just for the record, HPD was having trouble with the MDTs not updatiing, hanging, etc.
even long before they went to P25. I used to hear complaints on MDTs when they were
on the old analog UHF system as well. I hear complaints now on the TXWARN system too.

But, every agency seems to have trouble with the MDTs.
But that is a whole other matter not for discussion here.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Don’t be a little kid. This is a discussion group, and discussions do tend to morph.

Your original post was that the General Government Services site is actually 7 subsites. Ok, I’m sure you're right, but how does that impact scanner users? Can scanners isolate the individual subsites? I don’t think so, and that would mean it truly is a single site to us. I was trying to keep my answer simple, but you wanted to get pedantic. I simply complied so please don’t pout.

If, by "mobile computer" you are referring to the onboard MCT or MDT (mobile data terminal),

or whatever the agency calls it -- EVERY agency I listen to has trouble with the

computers. They are always having to get dispatch to clear their calls for them

because the MDT won't work or "hangs." Just listen to an agency for awhile and

you will hear them complain.

BUT the mobile computers have nothing at all to do with the radio network.

To the group...

I'm sorry I got the thread so far off topic. I apologize.

To Scott...

I should have stopped responding to earlier. I was just trying to correct your misinformation about site 5 being only 1 RF site and you somehow turned it into the MDT's don't work.

Obviously you know more about how radios, and this system specifically, do and should work than I do. I apologize for questioning your knowledge.

Scott Royall <royall@...> wrote:

Ha! Where do I start? Maybe with the comment about robustness? I mean yeah, it’s more robust than nothing, but it’s not as good as you seem to indicate.

Subject: RE: [HoustonScan] scanner for XMAS

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I'm having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

Subject: RE: [HoustonScan] scanner for XMAS

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Scott Royall <royall@...> wrote:

Just for the record, HPD was having trouble with the MDTs not updatiing, hanging, etc.

even long before they went to P25. I used to hear complaints on MDTs when they were

on the old analog UHF system as well. I hear complaints now on the TXWARN system too.

But, every agency seems to have trouble with the MDTs.

But that is a whole other matter not for discussion here.

From: Scott Royall
Topic: 29922 Message: 29984

I don’t doubt his knowledge. I was originally dealing with someone confused about the FDMA availability of HPD and HFD, and Kevin’s uber-technical description of the composition of the General Government Services Layer (as RadioReference calls it) just was overwhelming.

Ok, get off Kevin and keep the responses non personal. Kevin really knows his stuff and we should all listen and learn.

As for opinions, lets not direct those toward anyone in particular and realize we have a good group and each of us should learn of everyone's posts.

To the group...

I'm sorry I got the thread so far off topic. I apologize.

To Scott...

I should have stopped responding to earlier. I was just trying to correct your misinformation about site 5 being only 1 RF site and you somehow turned it into the MDT's don't work.

Obviously you know more about how radios, and this system specifically, do and should work than I do. I apologize for questioning your knowledge.

Scott Royall <royall@...> wrote:

Ha! Where do I start? Maybe with the comment about robustness? I mean yeah, it’s more robust than nothing, but it’s not as good as you seem to indicate.

To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] scanner for XMAS

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I’m having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

Subject: RE: [HoustonScan] scanner for XMAS

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Scott Royall <royall@...> wrote:

Date: 2013-12-09 22:47:18 UTC
From: Madcow
Topic: 29922 Message: 29985

Ok so the fact that the GGSL is 7 sub sites vs one site does make a difference to a scanner user. If you just mention the one site and not the others and the scanner user wanted to point a directional antenna for better reception it would be best to do it in direction of the nearest site.

As for the performance of the new P25 site it is much better than the old one. If there are HPD officers complaining of poor coverage it may be due to the fact some have bought the short antennas instead of using the ones the system was designed to operate on. The short antennas have a measured 15 dB lost on average.

The new system has a far better coverage area and performance than either the old HFD or HPD radio systems. The new system just let's them know when they are not talking. The areas where there might be an actual penetration issue are the same areas where the old one did not work, but now actions have been taken to minimize the coverage issues.

There are and always will be areas where RF just scientifically will not work say a room with 3 ft thick concrete walls with mass quantity of steel piping.

Perception is not always reality and scientific documentation has proven the new system is more redundant and reliable.

Now if some people choose to not listen to individuals on here that have far more working knowledge of the radio systems in the region all we can do is try and stop them from spreading false information to those trying to increase there knowledge.
The Government General Service Layer has 7 sun sites simulcasting. The Public safety layer has over 40 and continues to grow.

The old Public Works system had one site.

The old HFD system had 4 transmitter sites simulcast.

The Old HPD had if I remember 6 transmitter sites zoned.

So do the coverage math on that.

29986. RE: [HoustonScan] scanner for XMAS

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-12-09 23:27:44 UTC
From: Scott Royall
Topic: 29922 Message: 29986

An interesting and technically-astute post. A few comments though.

I do wonder, though, how many scanner users use directional antennas. I don’t, and I suspect the person I was originally addressing doesn't either.

Are even the general locations of the subsites readily available? Probably not, for security reasons. Subsite information isn't on RadioReference.

My point is that most scanner users won't understand the detailed explanations enough to benefit from them. Instead, they lose interest and enjoy the hobby a bit less because they don’t realize their FDMA scanners will still receive HPD. I was trying to simply state the situation, and I was corrected at a level above what most users would understand. Geez guys, try to understand your fellow users.

Your original post was that the General Government Services site is actually 7 subsites. Ok, I’m sure you're right, but how does that impact scanner users? Can scanners isolate the individual subsites? I don’t think so, and that would mean it truly is a single site to us. I was trying to keep my answer simple, but you wanted to get pedantic. I simply complied so please don’t pout.

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I'm having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Obviously you know more about how radios, and this system specifically, do and should work than I do. I apologize for questioning your knowledge.

And who I work for is academic.

Regardless of the manufacturer, all simulcast systems work in basically the same way.

So far I've said absolutely nothing defending the system performance as that wasn't the topic of discussion.

Scott Royall <royall@...> wrote:

Do you work for Motorola? I wouldn’t call the new system robust at all. Just listen for a day and you'll get an earful of user complaints. The mobile computer net hangs, the radios mess up, etc, etc, etc.

Subject: RE: [HoustonScan] scanner for XMAS

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...m> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I’m having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

Subject: RE: [HoustonScan] scanner for XMAS

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Scott Royall <royall@...> wrote:

29991. Re: [HoustonScan] scanner for XMAS

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-12-10 01:24:07 UTC
From: Kevin Chessher
Topic: 29922 Message: 29991

Never said nor implied it would help anybody.

You asked if the locations of the sites was publicly available and I pointed you to where to find the information.

And I quote...

"Are even the general locations of the subsites readily available? "

Sometimes I feel as though I'm typing in some ancient alphabet only I can read.

On 12/9/2013 7:14 PM, Scott Royall wrote:

29992. RE: [HoustonScan] scanner for XMAS

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-12-10 01:44:18 UTC
From: Scott Royall
Topic: 29922 Message: 29992

Quite so. I was asking if an average person could obtain the information. The unstated phrase was: for their own benefit. No, I didn’t explicitly say that, but why else would they look for said information? Colloquial English depends heavily on contextual assumptions. The alternative is that we all speak in “legalese.” J

To: HoustonScan@yahoogroups.com
Subject: Re: [HoustonScan] scanner for XMAS

Never said nor implied it would help anybody.

You asked if the locations of the sites was publicly available and I pointed you to where to find the information.

And I quote...

"Are even the general locations of the subsites readily available? "

Sometimes I feel as though I'm typing in some ancient alphabet only I can read.

On 12/9/2013 7:14 PM, Scott Royall wrote:

Could be, but I don’t recall it. I am also not sure how that will help a portable user. Carrying a beam around would get a little awkward. J

Mark’s comments are certainly intriguing, and I’d love to respond. Of course, doing so would send this discussion careening off onto another tangent. Are we ok with that?

To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] scanner for XMAS

A FCC license search would show all locations. I believe JoshW even made a Google maps file of the subsites and posted it here...but I'm probably wrong.

Scott Royall <royall@...> wrote:

An interesting and technically-astute post. A few comments though.

I do wonder, though, how many scanner users use directional antennas. I don’t, and I suspect the person I was originally addressing doesn't either.

Are even the general locations of the subsites readily available? Probably not, for security reasons. Subsite information isn't on RadioReference.

My point is that most scanner users won't understand the detailed explanations enough to benefit from them. Instead, they lose interest and enjoy the hobby a bit less because they don’t realize their FDMA scanners will still receive HPD. I was trying to simply state the situation, and I was corrected at a level above what most users would understand. Geez guys, try to understand your fellow users.

Subject: Re: [HoustonScan] scanner for XMAS

Ok so the fact that the GGSL is 7 sub sites vs one site does make a difference to a scanner user. If you just mention the one site and not the others and the scanner user wanted to point a directional antenna for better reception it would be best to do it in direction of the nearest site.

As for the performance of the new P25 site it is much better than the old one. If there are HPD officers complaining of poor coverage it may be due to the fact some have bought the short antennas instead of using the ones the system was designed to operate on. The short antennas have a measured 15 dB lost on average.

The new system has a far better coverage area and performance than either the old HFD or HPD radio systems. The new system just let's them know when they are not talking. The areas where there might be an actual penetration issue are the same areas where the old one did not work, but now actions have been taken to minimize the coverage issues.

There are and always will be areas where RF just scientifically will not work say a room with 3 ft thick concrete walls with mass quantity of steel piping.

Perception is not always reality and scientific documentation has proven the new system is more redundant and reliable.

Now if some people choose to not listen to individuals on here that have far more working knowledge of the radio systems in the region all we can do is try and stop them from spreading false information to those trying to increase there knowledge.

The Government General Service Layer has 7 sun sites simulcasting. The Public safety layer has over 40 and continues to grow.

The old Public Works system had one site.

The old HFD system had 4 transmitter sites simulcast.

The Old HPD had if I remember 6 transmitter sites zoned.

So do the coverage math on that.

Mark

On Dec 9, 2013, at 3:57 PM, "Scott Royall" <royall@...> wrote:

Don’t be a little kid. This is a discussion group, and discussions do tend to morph.

Your original post was that the General Government Services site is actually 7 subsites. Ok, I’m sure you're right, but how does that impact scanner users? Can scanners isolate the individual subsites? I don’t think so, and that would mean it truly is a single site to us. I was trying to keep my answer simple, but you wanted to get pedantic. I simply complied so please don’t pout.

To the group...

I'm sorry I got the thread so far off topic. I apologize.

To Scott...

I should have stopped responding to earlier. I was just trying to correct your misinformation about site 5 being only 1 RF site and you somehow turned it into the MDT's don't work.

Obviously you know more about how radios, and this system specifically, do and should work than I do. I apologize for questioning your knowledge.

Scott Royall <royall@conchbbs.com> wrote:

Ha! Where do I start? Maybe with the comment about robustness? I mean yeah, it’s more robust than nothing, but it’s not as good as you seem to indicate.

And who I work for is academic.

Regardless of the manufacturer, all simulcast systems work in basically the same way.

So far I've said absolutely nothing defending the system performance as that wasn't the topic of discussion.

Scott Royall <royall@...> wrote:

Do you work for Motorola? I wouldn't call the new system robust at all. Just listen for a day and you'll get an earful of user complaints. The mobile computer net hangs, the radios mess up, etc, etc, etc.

Subject: RE: [HoustonScan] scanner for XMAS

Fragile? Hardly, it's quite robust.

Scott Royall <royall@...> wrote:

One word: Wow!

Talk about a really fragile solution. I can see why the FBI might use it, since the alternative could have been radios with thousands of channels. But locally? That raises a lot of questions about how much redundancy do you really need with FDMA and TDMA nets.

From: HoustonScan@yahoogroups.com [mailto:HoustonScan@yahoogroups.com] On Behalf Of Kevin Chessher

Sent: Monday, December 09, 2013 07:08
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] scanner for XMAS

The ideal situation is to have the subscribers in a 6dB capture of a single subsite as much as possible. But that can't always happen, so the need is critical for all stations to be EXACTLY on frequency.

In the olden days you could hear the FBI repeaters on 163.9625 sync as they keyed. You would hear the heterodyne slowly fade as they all got on frequency.

Scott Royall <royall@...> wrote:

Boy, the last sentence of your first paragraph is quite a understatement! Since the base modulation is still FM, I’m having a hard time getting my head around controlling the RF interference. This seems to be more over-engineered than the King Tiger!

Still, the users do see it as a single site.

Sent: Sunday, December 08, 2013 21:07
To: HoustonScan@yahoogroups.com
Subject: RE: [HoustonScan] scanner for XMAS

It's called simulcast. All subsites act as one "site", each site is a duplicate of the others. All channels at each subsite key up simultaneously (well technically not due to launch delays, but that's a separate discussion) so it appears as a single site to the radio. One subsite is designated as the "prime site" (again technicality it could be anywhere but that's a separate discussion also) where the site controllers and comparator's reside. Simulcast takes great engineering (via ERP, luanch delays and rad centers) to avoid too much RF overlap between subsites.

Motorola brands it's P25 simulcast as using LSM (it's version of CQPSK). A Google search would probably result in a plethora of results.

Scott Royall <royall@...> wrote:

Ok, please enlighten me. 7 sites, 1 control channel? I’m dying to know how that’s done.

And academic or not, misinformation is never good.

On 12/8/2013 6:29 PM, Kevin Chessher wrote:

You're probably correct, all this newfangled P25 stuff is confusing.

I can barely run 4 instances of RSSIMon and ZOC on the same computer capturing CC data plus HOST/DSP data with each APX7000 needing it's own static IP and then interpreting that data plus ATIA data to see why a radio bonked. :-P

On 12/8/2013 6:18 PM, Scott Royall wrote:

That is not how I read the RadioReference page on TxWARN. The “government” site is indeed 5 of several others. Whether it’s really a single site or several ”subsites” is academic (although I wonder how a single active control could be valid for separate subsites). The thing that irks me is when people don’t even pay attention to information that has appeared in this group. To wit, it isn't correct to assume you need TDMA to hear HFD and HPD. It’s not true. In fact, the only channels that are exclusively TDMA are also encrypted so you won't be hearing them anyway. J All of the unencrypted channels have FDMA equivalents that are broadcasted exclusively through the “General Government Services” site, 5, of RFSS 3. However, using that turgid terminology appears to baffle most group members.

I was arguably over-simplifying for the masses. Got that? J

Now, I strongly suspect HPD/HFD won't stay so scanner-friendly forever, but that's the stuff of a totally separate thread.

Last time I talked to him was 2005/6 or so.

I know the self support tower on 359 where it goes east/west had one (west of Pecan Grove) and the 500ft guyed tower on 762 (east of 59) had one.

I would venture to guess what you found would be the headend of the system.

All of this is just speculation and based on my observations. So take it FWIW.

If even 1 FDMA radio is affiliated to the TG it will revert to FDMA.

That wasn't ubber technical was it?

Myles Barkman <kg5ai@comcast.net> wrote:

Just heard TG 45086 Lanier Building Security using FDMA on site 305.

RR has this as TDMA.

Will they sometimes go to FDMA for some reason?

This is the first time I have heard the TG.

30018. Houston antenna farm interference

Yahoo group: HoustonScan (2012 — 2013)
Date: 2013-12-14 17:12:06 UTC
From: <tobyneedler@...>
Topic: 30018 Message: 30018

Awhile back I posed a question about not being able to receive in the VHF band. I received some good advice here about it being interference from the antenna farm on the south side of Houston. I tried and failed to build a trap of my own. Then I tried the $4.99 FM trap from Radio Shack, which improved things, but it's still not what I want it to be. So now I'm in communication with Dale at PAR Electronics to try to figure out what I need, but unfortunately I'm not knowledgeable enough to give him the information he needs to recommend the appropriate trap. He needs to know the offender(s) and I don't know the frequencies that are being transmitted that are causing my interference. Would his VHF-FM filter be what I need or do I need something else? Any help would be appreciated...

The Veterans Affairs Medical Center was testing several days this week on their talkgroup 15 which they called "patch channel." They referred to testing on "the new conventional channel" which I'm assuming was patched to talkgroup 15. They referenced "Charlie Wilson" and "outpatient clinic" which I'm assuming is referring to the clinic in Lufkin (Charles Wilson VA Outpatient Clinic).

Mr. Barkman refreshed my memory...

Since no one knows exactly what is/may be causing the receiver desense issue, we can't be of much help. If you could give me an idea of where you live (neighborhood, intersection, etc.) I could maybe check out the area and see if I any that signals may be causing your issues.

No guarantees on me being able to make it out there or finding anything, but I can try.

Interesting that it wasn't licensed for OpenSky.

When all else fails revert to analog I guess.

Also, narrowband only applies to frequencies below 470 MHz.

Myles Barkman <kg5ai@comcast.net> wrote:I guess Centerpoint was using some portable radio system when they went up to Northeast Texas to help get power lines put back up after the ice storm up there.

These were licensed as conventional analog FM repeaters/simplex, and not narrowband at that.

Topic: 30012 Message: 30079

That is correct. However, I do not find the software interface of the PSR-800 to be particularly intuitive, especially to a user accustomed to scanning by banks. The fact that the 800 doesn't divide its memory into fixed-sized banks really torpedoes some people mentally. The 800 stores everything as objects, which can then be linked together in a variety of ways. A scanlist is just one example of a link-list. A computer science grad like me almost regards the 800 as a wet dream, because its software depends heavily on a data structure we studied for months, link-lists. The snag is that objects in the 800 are almost always linked into multiple lists. It’s entirely possible that Marvin has his “government layer” talkgroups inadvertently linked to other lists (and I don’t just mean scanlists) that are active. I discovered early on that simply “locking out” the government layer at the system level doesn't necessarily disable everything in its site and talkgroup lists.

Nuances like that are why I disagreed with you on how many sites are in what RR calls the “general government layer.” Of course you were technically correct, but I could easily imagine poor Marvin’s eyeballs spinning in his head at 7800 RPM! Since most scanners are portable or mobile, I didn't see how the average scanner user could really benefit from the technical depth of your explanation. I always try to remember the audience I’m addressing in this group, and the functional answer for most was “1.”

Date: 2013-12-31 18:59:56 UTC
From: Eric C. Carlson
Topic: 30093 Message: 30093

FPH NYE 2013 downtown is using the following (so far):
462.575 M [d 413]
462.625 M [d 413]
462.675 M [d 413] Headquarters?
464.325 M [d 413] Food and Beverage?
464.55 M [d 664] stage setup

The radios with DCS 413 have been used before for other events and probably belong to Spectrum Concessions. Other channels to look for based on previous usage:
464.5 M [d 413]
464.55 M [d 413]
464.825 M [d 413]
467.7625 M [d 413]

Hearing a new to me repeater on 158.790 PL 100. I see a new license for TDCJ Darrington and the traffic seems to match, so that would be my guess.

And no I couldn't stay away, so I just setup a rule (actually a "Filter" since I use Thunderbird) for the certain members. :-P
